Message

I feel proud to know that Bio- Medical Waste Management Cell, Directorate of Health Services, Government of NCT of Delhi is bringing out its Status Report 2006.

Waste Management is one of the important public health measures. To control hazards to human health and environment Ministry of Environment and Forest, Govt. of India has notified the Bio-Medical Waste (Management & Handling) Rules 1998 under the Environment (Protection) Act, 1986 (29 of 1986). The guidelines have also been prepared to enable each hospital for waste management in terms of segregation, collection, transportation, treatment and disposal of hospital waste.

Poor management of health-care waste may also damage the environment, in addition to creating opportunities for the collection of disposable medical equipment (particularly syringes), its re-sale and potential re-use without sterilization - a practice which causes an important burden of disease worldwide.

I feel that the compiled information will be very useful for all Medical & Para-medical personnel and general public large.

I congratulate all member of the team associated in preparing this useful report.

(Dr. YOGANAND SHASTRI)

Health care is the prime responsibility of the state. While providing health care to the community, these healthcare institutions generate waste. Bio-Medical Waste is a universal problem. Today, with increasing number of health care institutions and careless attitude of health care personnel, the job has become more challenging. To establish waste treatment facility by individual hospital / nursing home is a costly affair. Daily operation of medical activities, mass immunization campaigns and even in emergency situations, good health care waste management (HCWM) is crucial to prevent the exposure of health-care workers, patients, waste handlers and the community to infections, toxic effects and injuries.

Keeping in view the problems faced by smaller hospitals and nursing home, Government of NCT of Delhi has decided to provide services of a centralized biomedical waste treatment facility at reasonable cost to the health care units. Such facility has been established at Okhla in collaboration with private entrepreneur. The similar facility is likely to come up during current financial year at Gazipur.

The status report published by the Health Department will be very useful for all health care institutions at large and people in particular. I congratulate all the team members specially Dr. K.S. Baghotia, State Programme Officer who has put concerted efforts in compilation of this valuable report.

(Sh. D.S. Negi)

Dated

Message

Hygiene and sanitation are two major issues in public health. Delhi is generating more than 6500 metric tons of municipal waste daily. If we take even one percent of it as Bio-Medical Waste, it becomes 65 tons per day. It is not only the major hospitals, which contribute to its quantum but smaller hospitals, nursing homes, clinics, pathological laboratories, blood banks and research institutions also contribute a major chunk. Poor management of health care waste exposes healthcare workers, waste handlers and the community in the form of fatal infection, genotoxicity and cytotoxicity, physical injuries and public sensitivity

To have a check on these hazards Ministry of Environment and Forest, Govt. of India notified Bio-Medical waste (Management & Handling) Rules 1998 and amendments thereafter under Environment (Protection) Act, 1986.

There is not a single publication, which can work as a reference document for biomedical waste management in Delhi. Keeping in view this point, the up to date data available from different sources have been compiled to make it as a reference document. All the members of biomedical waste management cell, especially Dr. K.S. Baghotia have put enormous efforts in preparing this document. I am sure this document will be very useful for health care institutions and associated personnel in their day-to-day activities. I congratulate the team.

(Dr. S. S. Saha)

Preface

Healthcare waste (HCW) is a by-product of healthcare that includes sharps, non-sharps, blood, body parts, chemicals, pharmaceuticals, medical devices and radioactive materials. In other words, it includes all kinds of waste generated by health care establishments, research facilities, and laboratories including minor or scattered source-such as care taken at home (Insulin Injection). About 75% to 90% of the waste produced by health care providers is non-hazardous "general waste" comparable to domestic waste, whereas 10-25% is hazardous waste on human health & environment.

To prevent the hazards of this, Govt. of India notified Bio-Medical Waste (Management & Handling) Rules 1998 and the amendments there after under the Environment Protection Act. 1986. To implement these rules in NCT of Delhi, the government has notified Delhi Pollution Control Committee (DPCC) as prescribed authority and financial commissioner as appellate authority. There is also an advisory committee under chairmanship of Principal Secretary (Health) to advise Government and DPCC to address the problems related to Bio-medical waste.

Hospitals are required to ensure proper segregation, treatment and disposal of Bio-Medical Waste and adhere to prescribed limit of 48 hours for lifting of waste generated in hospitals which don't have on site treatment facilities. Despite availability of trained personnel, implementation of these rules is not adequate. Hospital authorities should take sufficient measures to change of attitude of the healthcare personnel, supply personal protective equipments, create public awareness and participation of citizens in Bio-Medical Waste Management.

The data/information in this report are taken from the Nursing Home Cell, Biomedical Waste Management Cell, Delhi Pollution Control Committee, Hospital Division of GOI, Publication of WHO and other printed reports.

I am thankful to Dr. Yoganand Shastri, the Minister of Health, Sh. D.S. Negi the Pr. Secretary (H & FW) and Dr. Anil Mehra, Director Health Services for constant encouragement, Dr. Ashok Kumar Rana, Dr. T.K. Joshi and Sh. Satendra, for providing relevant information and the staff of Bio-Medical Waste Management Cell especially Data Entry Operator for constant support in bringing out this report.

Dr. K.S. Baghotia

Introduction

Nature has made everything for a defined purpose. 'Anything which is not intended for further use is termed as waste'. In the scientific and industrial era, turnover of the products is very high. With industrialization and increasing urbanization the quantum of urban solid waste is also increasing. With increasing need of Health Care in fast changing society, the role of hospitals/nursing homes comes to the forefront. Hospital is a residential establishment which provides short term and long term medical care consisting of observational, diagnostic, therapeutic and rehabilitative services for a person suffering or suspected to be suffering from disease or injury and for parturient. It may or may not also provide services for ambulatory patients on an outpatient basis. In Delhi, there are 72 hospitals under govt. sector, 604 registered nursing homes and 936 dispensaries. In addition to this there are about 1550 unregistered establishments with different names like Nursing Homes, Medical Centres, Dental Hospitals, MTP centres etc. About 40000 hospital beds are available in the public and private sector in Delhi. With increasing number of hospitals and nursing homes in Delhi, this number may go up even higher. All these establishments in the process of providing health care, generate health care waste.

Hospital Waste or Health care waste should include any type of material generated in Health Care Establishments including aqueous and other liquid waste. The hospital waste may be defined as "Any solid, fluid or liquid waste material including its container and any other intermediate products which is generated during short term and long term care consisting of observational, diagnostic, therapeutic and rehabilitative services for a person suffering or suspected to be suffering from disease or injury and for parturient or during research pertaining to production and testing of biological during immunization of human beings. Hospital waste includes garbage, refuse, rubbish and Bio Medical Waste". All this waste needs proper management. Poor management of health-care waste can cause serious disease to health-care personnel, to waste workers, patients and to the general public. The greatest risk posed by infectious waste are accidental needle stick injuries, which can cause hepatitis B and hepatitis C and HIV infection. There are however numerous other diseases which could be transmitted by contact with infectious health-care wastes. During the handling of wastes, injuries occur when syringe-needles or other sharps have not been collected in rigid puncture proof containers. Inappropriate design and/or overflow of existing sharps container and moreover unprotected pits increase risk exposure of the health care workers, of waste handlers and of the community at large, to needle stick injuries. Best practices in health care recommend the segregation of sharps at the point of use.

Health care waste management (HCWM) is a process to help ensure proper hospital hygiene and safety of health care workers and communities. It includes planning and procurement, construction, staff training and behavior, proper use of tools, proper treatment and disposal methods inside and outside the hospital, and evaluation. Its many dimensions require a broader focus than the traditional health specialist or engineering point of view.

Advantages of good Health Care Waste Management: -

The need for proper HCWM has been gaining recognition slowly. It can:

1. help control nosocomial diseases (hospital acquired infections),
2. reduce community exposure;
3. dramatically reduce HIV/AIDS, sepsis, and hepatitis transmission from dirty needles and other improperly cleaned/disposed medical items;
4. easily and cost-effectively address health care worker safety issues, including reducing risk of needle sticks;
5. control zoonoses (diseases passed to humans through insects, birds, rats and other animals);
6. prevent illegal repackaging and resale of e.g.: contaminated needles;

7. cut cycles of infection; complementing the protective effect of proper hand washing;
8. avoid negative long-term health effects; eg, cancer, from the environmental release of toxic substances such as dioxin, mercury and others.

Historical Background:-

Waste management is one of the important public health measures. If we go into the historical background, before discovery of bacteria as cause of disease, the principle focus of preventive medicine and public health has been on sanitation. The provision of potable water, proper disposal of odour from sewage and refuse were considered the important factors in prevention of epidemics. The invention of water closet by John Harrington (1561-1612) facilitated flushing away human waste and helped to keep some dwellings clean, but flow from those indoor privies ran into cesspools and ultimately into waterways and wells. In 1848, the description of the sanitary conditions and health of English workers by Edwin Chadwick however had a great impact on the upper class and the governing bodies. His standards for proper removal of sewage and the protection of water supply was a stimulus to the Govt. of Britain as was Rudolph Virchow's militant advocacy of public health measures in Germany. The great glories of Roman hygiene were the water supply and the sanitation system. In several areas of Europe, public health remains primarily the responsibility of the inhabitants (for example street cleaning and drainage) but laws were created and inspectors were assigned for enforcement. 'Scavengers' were appointed to collect the garbage and space outside was assigned for dumping.

In the Indian Sub-continent, until Sir Mortimer Wheeler's work at Harappa in 1946, nothing was known with certainty of the way in which the people disposed of their dead, but from a cemetery then discovered, containing at least 57 graves, it appears that the burial was a usual rite. The whole cemetery has not been excavated and the evidence is not yet fully assessed, but it is clear that the dead were buried in an extended posture with pottery and personal belongings.

Present Scenario:-

Coming back to modern age, in the 21st century with increased use of disposable material and the presence of dreaded disease like Hepatitis B and AIDS, it is utmost important to take care of the infected and hazardous waste to save the mankind from disaster. The Health care institutions or hospitals which are responsible for care of morbid population are emitting voluminous quantity of rubbish, garbage and Bio Medical Waste matter each day from wards, operation theatre and outpatient areas. Proper management of hospital waste is essential to maintain hygiene, aesthetics, cleanliness and control of environmental pollution.

The hospital waste like body parts, organs, tissues, blood and body fluids along with soiled linen, cotton, bandage and plaster casts from infected and contaminated areas are very essential to be properly collected, segregated, stored, transported, treated and disposed of in a safe manner to prevent nosocomial or hospital acquired infection. Various communicable diseases, that spread through water, sweat, blood, body fluids and contaminated organs, are important to be prevented. The Bio Medical Waste scattered in and around the hospitals invites flies, insects, rodents, cats and dogs that are responsible for the spread of communicable diseases like plague and rabies. Rag pickers in the hospital, sorting out the garbage are at a risk of getting tetanus and HIV infections. The recycling of disposable syringes, needles, IV sets and other article like glass bottles without proper sterilization are responsible for spread of Hepatitis, HIV, and other viral diseases. It becomes primary responsibility of health administrators to manage hospital waste in most safe and eco-friendly manner.

With the proliferation of blood born diseases, more attention is being focused on the issues of infectious medical waste and its disposal. Health care institutions must be aware of the potential risk in handling infectious waste, and adhere to the highest standards of transport and disposal. Education of health care personnel, patients and

community about the management of the infectious waste is crucial in today's health care arena. It is the responsibility of governments to create a framework for the safe management of health-care waste and to ensure that health-care facility managers take their share of responsibility to manage wastes safely. This requires a national strategy involving the Ministry of Health and other stakeholders. It is important that a designated authority coordinates these efforts and receives sufficient political support, funding and trained staff. Creating national action plans developing national health-care waste management guidelines and building capacity at the national level are all important activities which can help to minimize risks posed by health care waste.

With increasing awareness in general population regarding hazards of hospital waste, public interest litigations were filed against erring officials. Some landmark decisions/guidelines to streamline hospital waste management have been made in the recent past. These are:

1. Supreme Court judgment dated 1st March 1996 in connection with safe disposal of hospital waste, it ordered that
 - a. All hospitals with 50 beds and above should install either their own incinerator or an equally effective alternative method before 30th November 1996.
 - b. The incinerator or the alternative method should be installed with a necessary pollution control mechanism conforming to the standard laid down by Central Pollution Control Board (CPCB).
 - c. Hazardous medical waste should be segregated at source of generation and disinfected before final disposal.
2. Ministry of Environment & Forest, Govt. of India issued a notification for Biomedical Waste (Management & Handling) Rules 1998 in exercise of powers conferred by Section 6, 8 & 25 of the Environment (Protection) Act, 1986 that was published in "The Gazette of India Extraordinary, Part-II, Section 3-Sub-Section (ii) New Delhi, July 27, 1998". These rules were further amended in 2000 and 2003. Under these rules:
 - a. The Delhi Pollution Control Committee has been designated as Prescribed Authority to implement these rules in the National Capital Territory of Delhi.
 - b. In exercise of the Powers conferred by Rule 9 of the Bio-Medical Waste (Management & Handling) Rules, 1998 the Lt. Governor of Delhi has constituted an Advisory Committee Vide No. F 23 (322)/95/EN/99 to act such authority under the said Rules. The composition of the Advisory Committee has 10 members with Pr. Secretary (Health), Govt. of Delhi as Chairman and Director Health Services as Member Secretary / Convener.

It is the primary responsibility of the government to implement the recommendations and directions of the Supreme Court and these Rules in public interest, so that Biomedical waste does not cause any harm to men, animal and environment.

Biomedical Waste Management in Delhi

Biomedical waste if not handled properly may pose hazards to human health and environment in the form of fatal infection, genotoxicity and cytotoxicity, physical injuries and public sensitivity. To have a check on these hazards Ministry of Environment and Forests Govt. of India notified Bio-Medical Waste (Management & Handling) Rules 1998 and amendments thereafter under Environment (Protection) Act, 1986. There is a big network of health care institutions in Delhi with multiplicity of authorities in health sector.

The organization-wise Institutions are as follows: -

Figure 1

*These Health Care Institutions are inclusive of Allopathy, ISM and Homeopathy. There are 30 Hospitals under Government of Delhi. Total no of beds in hospitals under Government of NCT of Delhi are about 7704.

The list of hospitals with Bed strength is as follows:

Figure 2

Government Hospitals:

Figure 3

Under Govt. of NCT of Delhi, only Four Hospitals are having Incinerators and 9 hospitals are having Autoclaves and Shredders for Scientific Management of Bio-Medical Waste. Bio-Medical Waste from these Hospitals, where such facilities are not available are segregated and transported in special van to the centralized waste treatment facility. Under Biomedical Waste (Management & Handling) Rules 1998, all health care institutions are required to handle biomedical waste in a specified manner.

Biomedical Waste generated in Delhi Government Hospitals in December 2006:

Figure 4

Biomedical waste generated in Hospitals other than Delhi Govt.:

Figure 5

Delhi is generating approximately 6500 metric tons of waste out of which 65 tons are expected to be Biomedical Waste. The Government hospitals and major private hospitals have their own arrangement for treatment of biomedical waste. Biomedical waste generated in 30 Delhi govt. hospitals vary from 780 grams/bed/day (Shushruta Trauma Centre) to 30 gram /bed/day (Guru Nanak Eye Centre) with an average of 260 gram /bed /day (Figure 4).

Similarly Biomedical waste generated in 31 hospitals other than Delhi govt vary from 580 grams/bed/day (Infectious Disease Hospital) to 30 gram /bed/day (Venu Eye Institute and Research Centre) with an average of 200 gram /bed /day (Figure 5).

Incineration Capacity in Delhi

Figure 6

In Delhi according to the records available as per the ANNUAL REPORT submitted by the individual hospitals and also by the operators of a facility, 22446-kg/day biomedical wastes are generated. This does not include the waste generated in smaller clinics/laboratories which donot take services of operator facility and have not applied for

authorization. In Delhi besides these two operators of facility (M/s Biocare Technological Services and M/s Synergy Waste Management Company), a number of Government and private hospitals have installed their own waste disposal facilities in their hospitals for disposal of the waste generated.

At present as per records in Delhi 18 incinerators, 18 autoclaves and 3 microwaves are in operation. Besides this, a Government facilitated operator (Synergy Waste Management Private Limited) has established facility at Okhla that has become operational in November 2006. The institution wise capacity of incinerators in Delhi is shown in the above Graph (figure-6)

Segregation Containers: -

Figure 7

All Delhi Govt. hospitals and Dispensaries under this Directorate have already obtained /applied for authorization from DPCC under Bio-medical Waste (Management & Handling) Rules 1998. Authorization for new hospital and dispensaries if any will be obtained during current year. Delhi Government during the 10th five-year plan, has established Biomedical Waste Management Cell to monitor biomedical waste Management in Delhi. The hospitals under GNCT Delhi have been asked to have separate budget head in their hospitals for Biomedical Waste Management.

C. Problems faced by Different Hospitals/Nursing Homes:

There are 604 registered nursing homes in Delhi as on 31st December 2006. In addition to this, there are approximately 1550 unregistered health care units with different names in Delhi. The bed-wise distribution of registered nursing homes is given in figure 8.

In addition to these Govt. hospitals, dispensaries, registered and unregistered nursing homes, there are significant numbers of smaller health care units (clinics, diagnostic laboratories, blood banks), which contribute significantly in the generation of biomedical waste. A law for registration of diagnostic laboratories is being enacted in Delhi to curb the mushrooming of diagnostic laboratories in residential areas.

The Registered Nursing Homes In Delhi as on December 2006 :

Figure 8

Annual Expenditure Per Bed for Biomedical Waste Management:

Figure 9

The cost per bed per year involved in management of biomedical waste varies from Rs. 767 in Attar Sain Jain hospital to Rs. 14020 in RB Seth Jessa Ram Hospital, New Delhi. The average biomedical waste management cost per bed per year is Rs.5361. The institutions having on site treatment facility are spending three times as compared to the institutions utilizing services of Centralised facility. The average expenditure for institutions having onsite treatment facility is Rs. 7228 whereas the institutions using centralized facility are spending only Rs. 2100 per bed per annum.

Keeping in view the difficulties faced by private Hospitals, Nursing Homes and Clinics, that cannot make their own arrangements due to high cost involved in treatment facilities, there is a need for centralized system for treatment. In order to facilitate the proper treatment of the Biomedical waste generated from smaller Nursing

Homes/Clinics/Blood Banks/Diagnostic Laboratories etc., the Government is taking initiatives to establish centralized waste treatment facilities. The Delhi Government has purchased land from Delhi Development Authority (DDA) for establishment of Centralized Biomedical Waste treatment facilities at Okhla and Ghazipur in Delhi.

The proper disposal of infected and hazardous waste is a great concern for human health and the environment.

Various problems faces by smaller nursing homes are:

1. Lack of adequate space for treatment facility
2. High capital cost involved in procurement of equipment like incinerator
3. High operation and maintenance cost.
4. Multiple statutory bodies for licencing
5. Lack of training and experience to make the treatment facility cost effective

There is a need to generate awareness, increase knowledge and sharpen the skills of health care personnel working in hospitals/Nursing homes regarding management of biomedical waste and provisions of Biomedical Waste (Management & Handling) Rules 1998. The supportive staffs in Govt. hospitals as well as private institutions require frequent training/retraining on the job.

D. Steps taken by the Government: -

The Government hospitals and major private hospitals have their own arrangement for treatment of biomedical waste. During the 10th five-year plan; cell for the Biomedical Waste Management Cell under Directorate of Health Services, Government of NCT of Delhi has planned to:

Utilize the two sites at Okhla and Ghazipur in Delhi for establishing Centralized Bio-Medical Waste Treatment facilities (with a capacity of 10 Tons each) as a joint venture with the private sector/NGO etc. to be identified and selected through a transparent process.

The hospitals under GNCT Delhi have already been requested to have separate budget head in their hospitals for Biomedical Waste Management.

A team comprising of Additional Secretary (Health), Project Director (COEH) and Programme Officer (BMW) DHS (HQ) will carry out regular inspection of these Hospitals under NCT of Delhi. The regular monitoring will be done to ensure implementation of these rules in hospitals and dispensaries under government of NCT of Delhi.

The biomedical waste management cell has made available the relevant information on website: www.health.delhigovt.nic.in. The directorate will also carry out IEC activities to generate awareness in the community specially targeting the health care institutions in Delhi. The film/documentary on Biomedical waste management is has been distributed display in OPDs of major Hospitals in Delhi.

The Centre for Occupational and Environmental Health conducts regular training for Health Care Personnel to strengthen their capabilities for better biomedical waste management.

E. Progress for the Centralized Biomedical Waste Management Facility:

Govt. sector:

The Government of NCT of Delhi (GNCTD) has acquired 1000 sq. meter land from Delhi Development Authority (DDA) for establishment of Centralized Biomedical Waste treatment facilities at Okhla and Gazipur in Delhi. The centralized facility at Okhla has already been completed and became operational since November 2006. The work for Gazipur has been awarded and facility is likely to be commissioned by March 2007. This facility is available for treatment of the biomedical waste generated from Private Hospitals/Nursing Homes and the health care institutions under Govt. of NCT of Delhi where onsite treatment facilities are not available. The annual increment of 5% will be

applicable from January 2008. The details of the rates applicable are as follows:

Rates for utilizing Centralized Treatment Facility at Okhla:

Figure 10

Private sector:

At present there are two entrepreneurs in the market namely 'Synergy Waste Management Pvt Ltd. Okhla, Delhi.' and 'Biocare Technological Services, 55, Railway Road, Samaipur Industrial Area, Delhi-42'. Implementation of Biomedical Waste (Management & Handling) Rules 1998 cannot be carried out effectively without cooperation of Private Hospitals and Nursing Homes. Lot of untreated biomedical waste from private sector is going to Junk Dealers clandestinely. This can be seen from the past seizure of tons of biomedical waste from junk dealers in Mundaka area. There is immediate need to involve the community to check this menace. The implementing agencies also need to be more stringent to take the action against the offenders and lawbreakers.

F. Amendments in Delhi Nursing Homes Registration Rules:

This directorate has recently proposed to amend the Delhi Nursing Homes registration Rules to incorporate such clauses by which it becomes mandatory for nursing homes to implement the Biomedical Waste (Management & Handling) Rules 1998. The proposed clause is as under:

“11. Handling of Biomedical waste: - The nursing homes applying for registration shall abide by the guidelines framed by the Delhi Pollution Control Committee regarding the management of biomedical waste.

Guidelines for Authorizing Vehicle for Transportation of Bio-Medical Waste

Figure 11

The vehicles transporting Bio-Medical Waste (Management & Handling) Rules, 1998, must Under the Clause (4) of the sub-rule 6 of the Bio-Medical Waste (Management & Handling) Rules, 1998 To comply with requirements of the BMW Act and rules at all times. The vehicles shall: -

- 1) Be dedicated and kept solely for the transport of Bio-Medical Waste.
- 2) Be so designed and fabricated that they can be cleaned and drained in a manner that waste matter do not get trapped on edges or crevices, so as to avoid harboring of insects or vermin.
- 3) Allow waste to be loaded, secured and unloaded, and should not contain any seepage from damaged containers.
- 4) Be steam cleaned and clinically disinfected once in a week.
- 5) Have separate containers for transporting different kinds of the waste bags.
- 6) Have only one opening.
- 7) Have loading platform that is large, foldable and strong enough to withstand an average weight of 70 kgs to load of waste.
- 8) Have a fully enclosed, lockable body.
- 9) C.N.G. fitted/shall comply with the latest emission norms in force at the time of registration.
- 10) Have the following information on the access door/and sides of the vehicles in large Red bold letters.
 - The name of the transporter.

- The Biohazard symbol as per Bio-Medical waste rules be, clearly written as enclosed in the Annexure.
 - The transporter's permit or license number.
- 11) All vehicles transporting Bio-Medical waste shall carry a spill containment and cleanup kit in side the vehicle. The kit shall comprise of the following items:
- Material designed to absorb spilled liquids. The amount of absorbent material shall be rated by the manufacture as having a capacity to absorb a minimum of 40 liters.
 - Minimum 4 liters of disinfectant in a sprayer capable of dispersing its charge in a mist and in a stream. The disinfectant shall be hospital grade.
 - Plastic bags to double enclose 15% of the maximum load accumulated or transported (Up to a maximum of 50 bags). These bags shall be large enough to over pack any box or other container normally.
 - Two new sets of disposable overall, gloves, footwear and goggles. Boots should be of thick rubber and must be impermeable to liquids, and gloves shall be of heavy neoprene or equivalent (boots, gloves, and breathing devices, may be reused if fully disinfected between uses). Protective breathing devices shall be approved for filtering particulates and mists, disposable HEPA masks will suffice, Tape for sealing openings at wrists and ankles shall also be in the kit.
- 12) The vehicle used for carrying Bio-Medical Waste should carry a glass level as given in 6.3 infectious substances under rule 137 of the Central Motor Vehicles Rules, 1993.
- 13) The vehicle used for carrying BMW should not, as far as possible, ply during peak hours and avoid congested and busy roads in the interest of the public health in general.
- 14) The registered owners of the proposed transport vehicles should be directed to apply for permit as required u/s 66 of the Motor Vehicles Act, 1988 to Assistant Secretary, State Transport Authority, 5/9, Under Hill Road, Delhi-54 and also take the vehicles for inspection and fitness to Board of Inspection Unit, Burari at the time of registration of new vehicle and there after every year initial registration of two years
- 15) The vehicle used for transportation of bio-medical waste should not be engaged/hired before they have the requisite certificate of registration, certificate of fitness, insurance, permit and have paid the Motor Vehicles Tax, as provided under the law.

G

uidelines for the safe Transport of Infectious Substances and Diagnostic Specimens

Geneva, 1997

WORLD HEALTH ORGANIZATION
Division of Emerging and Other Communicable
Diseases Surveillance and Control

Introduction

These guidelines are applicable to the transport of infectious substances and diagnostic specimens both nationally and internationally. They provide information for identifying and classifying the material to be transported and for its safe packaging and transport. The guidelines stress the importance of developing a working relationship between the groups involved - the sender, the carrier and the receiver - in order to provide for the safe and expeditious transport of this material.

Postal, airline and other transport industry personnel hold concerns about the possibility of their becoming infected as the result of exposure to infectious microorganisms that may escape from broken, leaking or improperly packaged material. The packaging of infectious materials for transport must therefore address these concerns and be designed to minimise the potential for damage during transport. In addition, the packaging will serve to ensure the integrity of the materials and timely processing of specimens.

There are no recorded cases of illness attributable to the release of specimens during transport, although there are reported incidents of damage to the outer packaging of properly packaged materials. The shipment of unmarked and unidentified infectious materials, improperly packaged, obviously increases the overall potential for exposure to all persons. The international regulations for the transport of infectious materials by any mode of transport are based upon the Recommendations of the United Nations Committee of Experts on the Transport of Dangerous Goods (UN). The Universal Postal Union (UPU) reflects these recommendations in its regulations, particularly for packaging. The International Civil Aviation Organization (ICAO) and the International Air Transport Association (IATA) have also incorporated the UN Recommendations in their respective regulations, as have other international transport organizations. The World Health Organization serves in an advisory capacity to these bodies. This document provides practical guidance to facilitate compliance with current international regulations. If, at a future date, any modification is made in the section of the UN Recommendations on the Transport of Dangerous Goods dealing with infectious substances and diagnostic specimens, these guidelines will be updated accordingly.

Definitions

For the purpose of describing transport safety measures the terms "infectious substances" and "infectious materials" are considered synonymous. The term "infectious substances" will be used in this document.

Infectious substances

An infectious substance is defined as a substance containing a viable microorganism, such as a bacterium, virus, rickettsia, parasite or fungus, that is known or reasonably believed to cause disease in humans or animals*.

With respect to packaging and transport situations, infectious substances include:

1. all cultures' containing or suspected of containing an agent which may cause infection;
2. human or animal'samples that contain such an agent in quantities sufficient to cause infection, should an exposure to them occur due to a transport mishap
3. sample(s) from a patient with a serious disease of unknown cause
4. other specimens not included above and designated as infectious by a qualified person, e.g. a physician, scientist, nurse, etc.

- * This definition is taken from the current UN Recommendations on the Transport of Dangerous Goods. Prions are not included in this definition although they are considered to be infectious agents.

Diagnostic specimens

A diagnostic specimen is defined as any human or animal material including, but not limited to, excreta, blood and its components, tissue and tissue fluids collected for the purposes of diagnosis, but excluding live infected animals.

Diagnostic specimens resulting from medical practice and research are considered a negligible threat to the public health.

Diagnostic specimens obtained from patients with suspected infectious diseases may contain limited quantities of an infectious agent. There are very few agents which may be the source of an infection as a result of a transport mishap. If exposure to the specimen due to transport mishap could result in an infection, the diagnostic specimen must be packaged, labelled and transported as an infectious substance. Diagnostic specimens collected during an investigation of an outbreak of a serious disease of unknown cause must be handled as infectious substances.

Packaging, Labelling and Documentation for Transport

Because of the distinction of risks between infectious substances and diagnostic specimens, there are variations to the packaging, labelling and documentation requirements. The packaging requirements are determined by the UN and are contained in ICAO and IATA regulations in the form of Packaging Instructions (PI) 602 and 650. The requirements are subject to change and upgrade by these organisations. The current packaging requirements are described below. UN approved packaging systems are available commercially.

Basic triple packaging system

The system consists of three layers as follows.

1. Primary receptacle. A labelled primary watertight, leak-proof receptacle containing the specimen. The receptacle is wrapped in enough absorbent material to absorb all fluid in case of breakage.
2. Secondary receptacle. A second durable, watertight, leak-proof receptacle to enclose and protect the primary receptacle(s). Several wrapped primary receptacles may be placed in one secondary receptacle. Sufficient additional absorbent material must be used to cushion multiple primary receptacles.
3. Outer shipping package. The secondary receptacle is placed in an outer shipping package which protects it and its contents from outside influences such as physical damage and water while in transit.

Specimen data forms, letters and other types of information that identify or describe the specimen and also identify the shipper and receiver should be taped to the outside of the secondary receptacle.

Requirements for infectious substances

The basic triple packaging system is used with the following additional specifications and labelling and documentation requirements.

Infectious substances may only be transported in packaging which meets the UN

class 6.2 specifications and packaging instruction (PI)602. This ensures that strict performance tests which include a nine metre drop test and a puncture test have been met. The outer shipping package must bear the UN Packaging Specification Marking (Figure 2). UN-approved packaging supplier listings may be obtained from carriers or from the appropriate national ministry or department, e.g. the Ministry of Transport, etc.

Figure 2

Hand carriage of infectious substances is strictly prohibited by international air carriers, as is the use of diplomatic pouches for that purpose.

The maximum net quantity of infectious substances which can be contained in an outer shipping package is 50 mL or 50g if transport is by passenger aircraft. Otherwise, the limit per package is 4L-4Kg for transport by cargo aircraft or other carriers. Primary receptacles exceeding 50 mL in combination packing must be oriented so the closures are upward, and labels (arrows) indicating the "UP" direction must be placed on two opposite sides of the package. The passenger aircraft quantify limits do not apply to blood or blood products for which there is no reason to believe they contain infectious substances, when in receptacles of not more than 500 mL each and with a total volume of not more than 4L in the outer package.

Hazard labels for dangerous goods

For all dangerous goods to be shipped by airfreight, specific hazard label (s) must be affixed to be outside of each package. The following hazards labels are of importance for culture collections or other institutions shipping biological substances.

Hazard labels for infectious substances and for generically modified microorganisms which meet the IATA definition of an infectious substance:

Name : Infectious Substance
 Minimum dimensions : 100 x 100 mm
 For small packages : 50 x 50 mm (black and white)

Hazard label for noninfectious genetically modified microorganisms and for carbon dioxide, solid (dry ice)

Name : Miscellaneous
 Minimum dimensions : 100 x 100 mm

For small packages : 50 x 50 mm (black and white)
 Hazard label for liquid nitrogen:
 Name : Non-flammable gas
 Minimum dimensions : 100 x 100 mm
 For small packages : 50 x 50 mm (green and white)

Packages containing liquid cultures of infectious organisms and genetically modified microorganisms must be packed so that the closure (s) of the inner packaging (s) are upward: the upright position of the packaging must be indicated by two "Package Orientation" labels (black or red arrows). The labels must be affixed on opposite sides of the packaging. A label "THIS SIDE UP" or "THIS END UP" may also be displayed on the top cover of the package:

Name : Package orientation
 Minimum dimensions : 74 x 105 mm (Black or red and white)

For small packages of infectious substances dimensions may be halved.

In case shipments include only freeze-dried cultures the quantity should be given in g or mg. not in ml. The "PACKAGE ORIENTATION" labels should be affixed to avoid any delay.

Labelling of the outer package for shipment of infectious substances must include the elements listed hereafter.

- I. The International Infectious Substance Label.
2. An address label with the following information.
 - the receiver's (consignee) name, address and telephone number
 - the shipper's (consignor) name, address and telephone number
 - the UN shipping name (Infectious Substances Affecting Humans or Animals as the case may be) followed by the scientific name of the substance
 - the UN Number (Humans - UN2814, Animals UN2900)
 - temperature storage requirements (optional).

If the outer package is further packed in an overpack (with dry ice for instance) both outerpack and overpack must carry the above information, and the overpack must have a label stating "INNER PACKAGES COMPLY WITH PRESCRIBED SPECIFICATIONS".

3. Required shipping documents - these are obtained from the carrier and are fixed to the outer package:
 - the shipper's Declaration of Dangerous Goods (Figure 4 is one example)
 - a packing list/proforma invoice which includes the receiver's address, the number of packages, detail of contents, weight, value (note: state that there is "no commercial value" as the items are supplied free of charge)
 - An airwaybill if shipping by air.
4. An import and/ or export permit and/or declaration if required.
5. If the outer package contains primary receptacles exceeding 50 mL in combination at least two "Orientation Labels" (arrows) must be placed on opposite sides of the package showing correct orientation of the package.

Requirements for diagnostic specimens

The basic triple packaging system is used with the following specifications and labelling requirements.

Diagnostic specimens may be transported in packaging which meets the packaging instruction (PI)650. The UN specification marking is not required.

Primary receptacles may contain up to 500 mL each, the total volume in the outer package not to exceed 4L.

Labelling of the outer package for the shipment of diagnostic specimens must include the following.

1. An address label with the following information:
 - the receiver's (consignee) name, address and telephone number
 - the shipper's (consignor) name, address and telephone number
 - the statement "Diagnostic Specimen, Not Restricted, Packed in Compliance with Packing Instruction 650".
2. Required shipping documents - these are obtained from the carrier and are fixed to the outer package:
 - a packing list/proforma invoice which includes the receiver's address, the number of packages, detail of contents, weight, value (note: state that there is "no commercial value" as the items are supplied free of charge)
 - an airwaybill if shipping by air.
3. An import and/or export permit and/or declaration (if required).

Note: The infectious substance label and the shipper's declaration of dangerous goods are not required for diagnostic specimens.

Requirements for Air Mail

Infectious substances and diagnostic specimens may be shipped by registered air mail. The basic triple packaging system is used with the same requirements as for other means of conveyance.

The address label must display the word "LETTRE" and the green Customs Declaration Label for Postal Mail is required for international mailing. Diagnostic specimens are to be identified with the violet UPU "PERISHABLE BIOLOGICAL SUBSTANCES" label. Infectious substances are to be identified with the International Infectious Substance label (see Figure 3). Infectious substances must also be accompanied with a shipper's Declaration of Dangerous Goods form (see Figure 4 at the end of the document).

Because of local/international restrictions, prior contact should be made with the local post office to ascertain whether the packaged material will be accepted by the postal service.

Refrigerants

Ice or dry ice when used in a shipment must be placed outside the secondary receptacle. If wet ice is used it should be in a leak-proof container and the outer package must also be leak-proof.

The secondary receptacle must be secured within the outer package to prevent damage after the refrigerant has melted or dissipated. Dry ice must not be placed inside the primary or secondary receptacle because of the risk of explosions. An overpack (a specially designed insulated outer package) may be used to contain dry ice. The outer package must permit the release of carbon dioxide gas if dry ice is used. UN Packing Instruction 904 must be observed.

If dry ice is used for infectious substances, the details must appear on the shipper's Declaration for Dangerous Goods. In particular, the outer most packing must carry the "MISCELLANEOUS" hazard label for dry ice (see Figure 3).

If liquid nitrogen is used as a refrigerant, special arrangements must be made in advance with the carrier. Primary

receptacles must be capable of withstanding extremely low temperatures and appropriate packaging requirement of the carrier must be observed. In particular, the outer most packing must carry the "NON-FLAMMABLE GAS" label for liquid nitrogen (see Figure 3).

Local Surface Transport

Examples include transport of specimens from a doctor's office/surgery to a laboratory, from a hospital to a diagnostic laboratory or from one laboratory to another. Such courier services may be operated by a hospital, a laboratory, a health service or other approved agency or organisation.

The principle of safe transport by this means is the same as for air or international transport - the material should not have any possibility of escaping from the package under normal conditions of transport.

The following practices should be observed:

1. specimen containers should be watertight and leak-proof
2. if the specimen container is a tube, it must be tightly capped and placed in a rack to maintain it in an upright position.
3. specimen containers and racks should be placed in robust, leak-proof plastic or metal transport boxes with secure, tight fitting covers.
4. the transport box should be secured in the transport vehicle.
5. each transport box should be labelled appropriately consistent with its contents.
6. specimen data forms and identification data should accompany each transport box.
7. a spill kit containing absorbent material, a chlorine disinfectant, a leak-proof waste disposal container and heavy duty reusable gloves should be kept in the transport vehicle.

Note: The practices 1 - 7 described above are not intended to supersede local or national requirements

Transport Planning

It is the responsibility of the sender to ensure the correct designation, packaging, labelling and documentation of all infectious substances and diagnostic specimens.

The efficient transport and transfer of infectious materials requires good coordination between the sender, the carrier and the receiver (receiving laboratory), to ensure that the material is transported safely and arrives on time and in good condition. Such coordination depends upon well-established communication and a partner relationship between the three parties.

All have specific responsibilities to carry out in the transport effort.

The sender'

1. makes advance arrangements with the receiver of the specimens including investigating the need for an import permit.
2. makes advance arrangements with the carrier to ensure:
 - that the shipment will be accepted for appropriate transport
 - that the shipment (direct transport if possible) is undertaken by the most direct routing, avoiding arrival at

weekends.

3. prepares necessary documentation including permits, dispatch and shipping documents.
4. notifies the receiver of transportation arrangements once these have been made, well in advance of expected arrival time.

The carrier

1. provides the sender with the necessary shipping documents and instructions for their completion.
2. provides advice to the sender about correct packaging
3. assists the sender in arranging the most direct routing and then confirms the routing
4. maintains and archives the documentation for shipment and transport
5. monitors required holding conditions of the shipment while in transit
6. notifies the sender of any anticipated (or actual) delays in transit.

The receiver

1. obtains the necessary authorisation(s) from national authorities for the importation of the material.
2. provides the sender with the required import permit(s), letter(s) of authorisation, or other document(s) required by the national authorities.
3. arranges for the most timely and efficient collection on arrival.
4. immediately acknowledges receipt to the sender.

Shipments should not be dispatched until:

- advance arrangements have been made between the sender, carrier and receiver
- the receiver has confirmed with the national authorities that the material may be legally imported
- the receiver has confirmed that there will be no delay incurred in the delivery of the package to its destination.

Detailed information on response and emergency safety measures in transport associated accidents can be found in Laboratory Biosafety Manual. Second edition (1993). Geneva: World Health Organization: (pp. 52 - 54).

Administration

49 CFR Part 171 et. al.
Hazardous Materials: Revision to
Standards for Infectious Substances:
Final Rule

§ 173.196 Infectious substances.

(a) *Division 6.2 packaging.* A Division 6.2 packaging must meet the test standards of § 178.609 of this subchapter and must be marked in conformance with § 178.503(f) of this subchapter. Division 6.2 packaging is a triple packaging consisting of the following components:

(1) A watertight primary receptacle.

(2) A watertight secondary packaging. If multiple fragile primary receptacles are placed in a single secondary packaging, they must be wrapped individually to prevent contact between them.

(3) An outer packaging of adequate strength for its capacity, mass and intended use. The outer packaging must measure at least 100 mm (3.9 inches) at its smallest overall external dimension.

(4) For a liquid infectious substance, an absorbent material placed between the primary receptacle and the secondary packaging. The absorbent material must be sufficient to absorb the entire contents of all primary receptacles.

(5) An itemized list of contents enclosed between the secondary packaging and the outer packaging.

(6) The primary receptacle or secondary packaging used for infectious substances must be capable of withstanding, without leakage, an internal pressure producing a pressure differential of not less than 95 kPa (0.95 bar, 14 psi).

(7) The primary receptacle or secondary packaging used for infectious substances must be capable of withstanding without leakage temperatures in the range of - 40°C to +55°C (- 40°F to +131°F).

(b) *Additional requirements for packaging infectious substances.* Infectious substances must be packaged according to the following requirements depending on the physical state and other characteristics of the material:

(1) *Infectious lyophilized (freeze-dried) substances.* Primary receptacles must be flame-sealed glass ampules or rubber-stopped glass vials fitted with metal seals.

(2) *Liquid or solid infectious substances*

(i) Infectious substances shipped at an ambient temperatures or higher. Authorized primary receptacles are those of glass, metal, or plastic. Positive means of ensuring a leakproof seal must be provided, such as heat seal, skirted stopper, or metal crimp seal. If screw caps are used, they must be secured by

positive means, such as with adhesive tape.

(ii) Infectious substances shipped refrigerated or frozen (ice, pre-frozen [1 packs, dry ice). Ice or dry ice must be placed outside the secondary packagings or in an overpack with one or more complete packages marked in accordance with § 178.503 of this subchapter. Interior supports must be provided to secure the secondary packagings in the original position after the ice or dry ice has dissipated. If ice is used, the outside packaging must be leakproof. If dry ice is used, the outside packaging must permit the release of carbon dioxide gas and otherwise meet the provisions in § 173.217. The primary receptacle and the secondary packaging must maintain their integrity at the temperature of the refrigerant used as well as the temperatures and pressures of air transport to which they could be subjected if refrigeration were lost.

(iii) Infectious substances shipped in liquid nitrogen. Primary receptacles capable of withstanding very low temperatures must be used. Secondary packaging must withstand very low temperatures and in most cases will need to be fitted over individual primary receptacles. The primary receptacle and the secondary packaging must maintain their integrity at the temperature of the liquid nitrogen as well as the temperatures and pressures of air transport to which they could be subjected if refrigeration were to be lost. Refrigerated liquid nitrogen packages must be metal vacuum insulated vessels or flasks (also called "dry shippers") vented to the atmosphere to prevent any increase in pressure within the packaging. The use of safety relief valves, check valves, frangible discs, or similar devices in the vent lines is prohibited. Fill and discharge openings must be protected against the entry of foreign materials that might cause an increase in the internal pressure. The package orientation markings specified in § 172.312(a) of this subchapter must be marked on the packaging. The packaging must be designed to prevent the release of any refrigerated liquid nitrogen irrespective of the packaging orientation.

(c) Live animals may not be used to transport infectious substances unless such substances cannot be sent by any other means. An animal containing or contaminated with an infectious substance must be transported under terms and conditions approved by the

Associate Administrator for Hazardous Materials Safety.

(d) Body parts, organs or whole bodies meeting the definition of Division 6.2 material must be packaged as follows: (1) In-Division 6.2 packaging, as specified in paragraphs (a) and (b) of this section; or

(2) In packaging meeting the requirements of § 173.197.

17. Section 173.197 is revised to read as follows:

§ 173.197 Regulated medical waste.

(a) *General provisions.* Non-bulk packagings, large packagings, and bulk outer packagings used for the transportation of regulated medical waste must be rigid containers meeting the provisions of subpart B of this part.

(b) *Non-bulk packagings.* Except as otherwise provided in § 173.134 of this part, non-bulk packagings for

regulated medical waste must be DOT specification packagings conforming to the requirements of Part 178 of this subchapter at the Packing Group II performance level. A non-bulk packaging must be puncture-resistant for sharps and sharps with residual fluid as demonstrated by conducting the performance tests in Part 178, Subpart M, of this subchapter on packagings containing materials representative of the sharps and fluids (such as sterile sharps) intended to be transported in the packagings.

(c) *Large Packagings.* Large Packagings constructed, tested, and marked in accordance with the requirements of the UN Recommendations and conforming to other requirements of this paragraph (c) may be used for the transportation of regulated medical waste, provided the waste is contained in inner packagings conforming to the requirements of paragraph (e) of this section. Each Large Packaging design must be capable of meeting the vibration test specified in § 178.819 of this subchapter. Each Large Packaging is subject to the periodic design requalification requirements for intermediate bulk containers in § 178.801(e) of this subchapter and to the proof of compliance requirements of § 178.801(j) and record retention requirements of § 178.801(l) of this subchapter. Inner packagings used for liquids must be rigid.

(1) Authorized packagings. Only the following Large Packagings are authorized for the transportation of liquid or solid regulated medical waste:

(i) Metal: 50A, 50B, or 50N.

(ii) Rigid plastic: 50H.

(2) Additional requirements. Each Large Packaging used to transport liquid regulated medical waste must contain absorbent material in sufficient quantity and appropriate location to absorb the entire amount of liquid present in the event of an unintentional release of contents. Each Large Packaging design intended for the transportation of sharps containers must be puncture resistant and capable of retaining liquids. The design must also be tested and certified as meeting the performance tests specified for intermediate bulk containers intended for the transportation of liquids in subpart 0 of part 178 of this subchapter.

(d) Non-specification bulk packaging. A wheeled cart (Cart) or bulk outer packaging (BOP) is authorized as an outer packaging for the transportation of regulated medical waste in accordance with the provisions of this paragraph (d).

(1) General requirements. The following requirements apply to the transportation of regulated medical waste in Carts or BOPs:

(i) Regulated medical waste in each Cart or BOP must be contained in nonbulk inner packagings conforming to paragraph (e) of this section.

(ii) Each Cart or BOP must have smooth, non-porous interior surfaces free of cracks, crevices, and other defects that could damage plastic film inner packagings or impede disinfection operations.

(iii) Except as otherwise provided in this paragraph (d), each Cart or BOP must be used exclusively for the transportation of regulated medical waste. Prior to reuse, each Cart or BOP must be disinfected by any means effective for neutralizing the infectious substance the packaging previously contained.

(iv) Untreated cultures and stocks of infectious substances containing Risk Group 4 materials may not be transported in a Cart or BOP.

(v) Division 6.1 toxic waste or Class 7 radioactive waste, with the exception of chemotherapeutic waste, may not be transported in a Cart or BOP.

(vi) Division 6.1 or Class 7 chemotherapeutic waste; untreated stocks and cultures of infectious substances containing Risk Group 2 or 3 pathogenic organisms; unabsorbed liquids; and sharps containers may be transported in a Cart or BOP only if packaged in rigid non-bulk packagings conforming to paragraph (a) of this section.

(2) Wheeled cart (Cart). A Cart is authorized as an outer packaging for the transportation of regulated medical

waste if it conforms to the following requirements:

(i) Each Cart must consist of a solid, one-piece body with a nominal volume not exceeding 1,655 L (437 gallons).

(ii) Each Cart must be constructed of metal, rigid plastic, or fiberglass fitted with a lid to prevent leakage during transport.

(iii) Each Cart must be capable of meeting the requirements of § 178.603 (drop test), as specified for solids at the Packing Group II performance level.

(iv) Inner packagings must be placed into a Cart and restrained in such a manner as to minimize the risk of breakage.

(3) Bulk outer packaging (BOP). A BOP is authorized as an outer packaging for regulated medical waste if it conforms to the following requirements:

(i) Each BOP must be constructed of metal or fiberglass and have a capacity of at least 3.5 cubic meters (123.6 cubic feet) and not more than 45 cubic meters (1,590 cubic feet).

(ii) Each BOP must have bottom and side joints of fully welded or seamless construction and a rigid, weatherproof top to prevent the intrusion of water (e.g., rain or snow).

(iii) Each opening in a BOP must be fitted with a closure to prevent the intrusion of water or the release of any liquid during all loading, unloading, and transportation operations.

(iv) In the upright position, each BOP must be leakproof and able to contain a liquid quantity of at least 300 liters (79.2 gallons) with closures open.

(v) Inner packagings must be placed in a BOP in such a manner as to minimize the risk of breakage. Rigid inner packagings may not be placed in the same BOP with plastic film bag inner packagings unless separated from each other by rigid barriers or dividers to prevent damage to the packagings caused by load shifting during normal conditions of transportation.

(vi) Division 6.1 or Class 7 chemotherapeutic waste, untreated cultures and stocks of infectious substances containing Risk Group 2 or 3 pathogenic organisms, unabsorbed liquids, and sharps may be transported in a BOP only if separated and secured as provided by paragraph (d)(3)(v) of this section.

(e) Inner packagings authorized for Large Packagings, Carts, and BOPs. After September 30, 2003, inner packagings must be durably marked or tagged with the name and location (city and state) of the offeror, except when the entire contents of the Large Packaging, Cart, or BOP originates at a single location and is delivered to a single location.

(1) Solids. A plastic film bag is authorized as an inner packaging for solid regulated medical waste transported in a Cart, Large Packaging, or BOP. Waste material containing absorbed liquid may be packaged as a solid in a plastic film bag if the bag contains sufficient absorbent material to absorb and retain all liquid during transportation. (i) The film bag may not exceed a volume of 175 L (46 gallons). The film bag must be marked and certified by its manufacturer as having passed the tests prescribed for tear resistance in ASTM D 1709-01, Standard Test Methods for Impact Resistance of Plastic Film by the Free Falling Dart Method (see § 171.7 of this subchapter), and for impact resistance in ASTM D 1922-00a, Standard Test Method for Propagation Tear Resistance of Plastic Film and Thin Sheeting by Pendulum Method (see § 171.7 of this subchapter). The film bag must meet an impact resistance of 165 grams and a tearing resistance of 480 grams in both the parallel and perpendicular planes with respect to the length of the bag.

(ii) The plastic film bag must be closed with a minimum of entrapped air to prevent leakage in transportation. The bag must be capable of being held in an inverted position with the closed end at the bottom for a period of 5 minutes without leakage.

(iii) When used as an inner packaging 2 for Carts or BOPs, a plastic film bag may not weigh more than 10 kg (22 lbs.) when filled.

(2) Liquids. Liquid regulated medical waste transported in a Large Packaging, Cart, or BOP must be packaged in a rigid inner packaging conforming to the requirements of paragraph (a) of this section. Liquid materials are not authorized for transportation in inner packagings having a capacity greater than 19 L (5 gallons). (3) Sharps. Sharps transported in a Large Packaging, Cart, or BOP must be packaged in a puncture resistant inner packaging (sharps container). Each sharps container exceeding 76 L (20 gallons) in volume must be capable of passing the performance tests in § 178.601 of this subchapter at the Packing Group II performance level. A sharps container may be reused only if it conforms to the following criteria: (i) The sharps container is specifically approved and certified by the U.S. Food and Drug Administration as a medical device for reuse. (ii) The sharps container must be permanently marked for reuse. (iii) The sharps container must be disinfected prior to reuse by any means

effective for the infectious substance the container previously contained. (iv) The sharps container must have a capacity greater than 7.57 L (2 gallons) and not greater than 151.42 L (40 gallons) in volume. 18. A new § 173.199 is added to read as follows:

§ 173.199 Diagnostic specimens and used health care products.

(a) *Diagnostic specimens.* Except as provided in this paragraph (a), diagnostic specimens are excepted from all other requirements of this subchapter when offered for transportation or transported in accordance with this section. Diagnostic specimens offered for transportation or transported by aircraft under the provisions of this section are subject to the incident reporting requirements in §§ 171.15 and 171.16 of this subchapter. A diagnostic specimen meeting the definition of a hazard class other than Division 6.2 must be offered for transportation or transported in accordance with applicable requirements of this subchapter.

(1) Diagnostic specimens must be packaged in a triple packaging, consisting of a primary receptacle, a secondary packaging, and an outer packaging.

(2) Primary receptacles must be packed in secondary packaging in such a way that, under normal conditions of transport, they cannot break, be punctured, or leak their contents into the secondary packaging.

(3) Secondary packagings must be secured in outer packagings with suitable cushioning material such that any leakage of the contents will not impair the protective properties of the cushioning material or the outer packaging.

(4) The completed package must be capable of successfully passing the drop test in § 178.603 of this subchapter at a drop height of at least 1.2 meters (3.9 feet).

The outer packaging must be clearly and durably marked with the words "Diagnostic Specimen." (b) *Liquid diagnostic specimens.* Liquid diagnostic specimens must be packaged in conformance with the following provisions:

(1) The primary receptacle must be leakproof with a volumetric capacity of not more than 500 mL (16.9 ounces).

(2) Absorbent material must be placed between the primary receptacle and secondary packaging. If several fragile primary receptacles are placed in a single secondary packaging, they must be individually wrapped or separated so as to prevent contact between them. The absorbent material must be of sufficient

quantity to absorb the entire contents of the primary receptacles. (3) The secondary packaging must be leak proof. (4) For shipments by aircraft, the primary receptacle or the secondary packaging must be capable of withstanding without leakage an internal pressure producing a pressure differential of not less than 95 kPa (0.95 bar, 14 psi). (5) The outer packaging may not exceed 4 L (1 gallon) capacity. (c) *Solid diagnostic specimens.* Solid diagnostic specimens must be packaged in a triple packaging, consisting of a primary receptacle, secondary packaging, and outer packaging, conforming to the following provisions: (1) The primary receptacle must be leak proof with a capacity of not more than 500 g (1.1 pounds). (2) If several fragile primary receptacles are placed in a single secondary packaging, they must be individually wrapped or separated so as to prevent contact between them. (3) The secondary packaging must be leakproof. (4) The outer packaging may not exceed 4 kg (8.8 pounds) capacity. (d) *Used health care products.* A used health care product being returned to the manufacturer or the manufacturer's designee is excepted from the requirements of this subchapter when offered for transportation or transported in accordance with this section. For purposes of this section, a health care product is used when it has been removed from its original inner packaging. Used health care products contaminated with or suspected of contamination with a Risk Group 4 infectious substance may not be transported under the provisions of this section.

(1) Each used health care product must be drained of free liquid to the extent practicable and placed in a watertight primary container designed and constructed to assure that it remains intact under conditions normally incident to transportation. For a used health care product capable of cutting or penetrating skin or packaging material, the primary container must be capable of retaining the product without puncture of the packaging under normal conditions of transport. Each primary container must be marked with a BIOHAZARD marking conforming to CFR 1910.1030(g)(1)(i). (2) Each primary container must be placed inside a watertight secondary container designed and constructed to

assure that it remains intact under the conditions normally incident to transportation. The secondary container

must be marked with a BIOHAZARD marking conforming to 29 CFR 1910.1030(g)(1)(i). (3) The secondary container must be placed inside an outer packaging with sufficient cushioning material to prevent movement between the secondary container and the outer packaging. An itemized list of the contents of the primary container and information concerning possible contamination with a Division 6.2 material, including its possible location on the product, must be placed between the secondary container and the outside packaging. (e) *Training.* Each person who offers or transports a diagnostic specimen or used health care product under the provisions of this section must know about the requirements of this section.

PART 177-CARRIAGE BY PUBLIC HIGHWAY

19. The authority citation for part 177 continues to read as follows: Authority: 49 U.S.C. 5101-5127; 49 CFR 1.53. 20. In § 177.834, paragraphs (a) and (g) are revised to read as follows:

§ 177.834 General requirements.

(a) Packages secured in a vehicle. Any tank, barrel, drum, cylinder, or other packaging not permanently attached to a motor vehicle and containing any Class 2 (gases), Class 3 (flammable liquid), Division 6.1 (poisonous), Division 6.2 (infectious substance), Class 7 (radioactive), or Class 8 (corrosive) material must be secured against movement within the vehicle on which it is being transported, under conditions normally incident to transportation.

(g) Prevent relative motion between containers. Containers of Class 1 (explosive), Class 2 (gases), Class 3 (flammable liquid), Class 4 (flammable solid), Class 5 (oxidizing), Division 6.1 (poisonous), Division 6.2 (infectious substance), or Class 8 (corrosive) materials must be so braced as to prevent motion thereof relative to the vehicle while in transit. Containers having valves or other fittings must be loaded to minimize the likelihood of damage thereto during transportation.

21. In § 177.843, paragraph (d) is added to read as follows:

§ 177.843 Contamination of vehicles.

(d) Each transport vehicle used to transport Division 6.2 materials must be

disinfected prior to reuse if a Division 6.2 material is released from its packaging during transportation. Disinfection may be by any means effective for neutralizing the material released.

PART 178-SPECIFICATIONS FOR PACKAGINGS

22. The authority citation for part 178 continues to read as follows:
Authority:49 V.S.C. 5101-5127:49 CFR 1.53.

23. In §178.503, paragraph (f) is added to read as follows:

§ 178.503 Marking of packagings.

(f) A manufacturer must mark every UN specification package represented as manufactured to meet the requirements of § 178.609 for packaging of infectious substances with the marks specified in this section. The markings must be durable, legible, and must be readily visible, as specified in § 178.3(a). An infectious substance packaging that successfully passes the tests conforming to the UN standard must be marked as follows:

- (1) The United Nations symbol as illustrated in paragraph (e) of this section.
- (2) The code designating the type of packaging and material of construction according to the identification codes for packagings specified in §178.502.
- (3) The text "CLASS 6.2".
- (4) The last two digits of the year of manufacture of the packaging.
- (5) The country authorizing the allocation of the mark. The letters "USA" indicate the packaging is manufactured and marked in the United States in compliance with the provisions of this subchapter.
- (6) The name and address or symbol of the manufacturer or the approval agency certifying compliance with subparts Land M of this part. Symbols, if used, must be registered with the Associate Administrator for Hazardous Materials Safety.
- (7) For packagings meeting the requirements of § 178.609(i)(3), the letter "U" must be inserted immediately following the marking designating the type of packaging and material required in paragraph (f)(2) of this section. 24. In § 178.601, paragraphs (c)(1), (c)(2), and (e) are revised to read as follows:

§ 178.601 General requirements.

(c)***

(1) Design qualification testing is the performance of the tests prescribed in

§ 178.603, § 178.604, § 178.605, § 178.606, § 178.607, § 178.608, or § 178.609, as applicable, for each the W O different packaging, at the start of production of that packaging.

(2) Periodic retesting is the performance of the drop, leak proofness, hydrostatic pressure, and stacking tests, as applicable, as prescribed in § 178.603, § 178.604, § 178.605, or § 178.606, respectively, at the frequency specified in paragraph (e) of this section. For infectious substances packagings required to meet the requirements of § 178.609, periodic retesting is the performance of the tests specified in § 178.609 at the frequency specified in paragraph (e) of this section.

(e) Periodic retesting. The packaging manufacturer must achieve successful test results for the periodic retesting at intervals established by the manufacturer of sufficient frequency to ensure that each packaging produced by the manufacturer is capable of passing the design qualification tests. Changes in retest frequency are subject to the approval of the Associate Administrator for Hazardous Materials Safety. For single or composite packagings, the periodic retests must be conducted at least once every 12 months. For combination packagings, the periodic retests must be conducted at least once every 24 months. For infectious substances packagings, the periodic retests must be conducted at least once every 24 months.

25. In § 178.609, the section heading, the text of paragraph (c) preceding the table, the introductory text of paragraph (d)(1), paragraphs (d)(1)(i), (d)(1)(iii), (d)(1)(iv), (e), (h)(1), (h)(2), and (i) are revised to read as follows:

§ 178.609 Test requirements for packagings for infectious substances.

(c) Packagings prepared as for transport must be subjected to the tests in Table I of this paragraph (c), which, for test purposes, categorizes packagings according to their material characteristics. For outer packagings, the headings in Table I relate to fiberboard or similar materials whose performance may be rapidly affected by moisture; plastics that may embrittle at low temperature; and other materials, such as metal, for which performance is not significantly affected by moisture or temperature. Where a primary receptacle and a secondary packaging of an inner packaging are made of different materials, the material of the primary receptacle determines the appropriate

test. In instances where a primary receptacle is made of more than one material, the material most likely to be damaged determines the appropriate test.

(d)***

(1) Where the samples are in the shape of a box, five must be dropped in sequence:

(i) Flat on the base;

(iii) Flat on the longest side; (iv) Flat on the shortest side; and

(e) The samples must be subjected to a water spray to simulate exposure to rainfall of approximately 50 mm (2 inches) per hour for at least one hour. They must then be subjected to the test described in paragraph (d) of this section.

(h)***

(1) Samples must be placed on a level, hard surface. A cylindrical steel rod with a mass of at least 7 kg (15 pounds), a diameter not exceeding 38 mm (1.5 inches), and, at the impact end edges, a radius not exceeding 6 mm (0.2 inches), must be dropped in a vertical free fall from a height of 1 m (3 feet), measured from the impact end of the sample's impact surface. One sample must be placed on its base. A second sample must be placed in an orientation perpendicular to that used for the first. In each instance, the steel rod must be aimed to impact the primary receptacle(s). For a successful test, there must be no leakage from the primary receptacle(s) following each impact.

(2) Samples must be dropped onto the end of a cylindrical steel rod. The rod must be set vertically in a level, hard surface. It must have a diameter of 38 mm (1.5 inches) and a radius not exceeding 6 mm (0.2 inches) at the edges of the upper end. The rod must protrude from the surface a distance at least equal to that between the primary receptacle(s) and the outer surface of the outer packaging with a minimum of 200 mm (7.9 inches). One sample must be dropped in a vertical free fall from a height of 1 m (3 feet), measured from the top of the steel rod. A second sample must be dropped from the same height in an orientation perpendicular to that used for the first. In each instance, the packaging must be oriented so the steel rod will impact the primary receptacle(s). For a successful test, there must be no leakage from the primary receptacle(s) following each impact.

(i) Variations. The following variations in the primary receptacles placed within the secondary packaging

are allowed without additional testing of the completed package. An equivalent level of performance must be maintained.

(1) Variation 1. Primary receptacles of equivalent or smaller size as compared to the tested primary receptacles may be used provided they meet all of the following conditions:

(i) The primary receptacles are of similar design to the tested primary receptacle (e.g., shape: round, rectangular, etc.).

(ii) The material of construction of the primary receptacle (glass, plastics, metal, etc.) offers resistance to impact and a stacking force equal to or greater than that of the originally tested primary receptacle.

(iii) The primary receptacles have the same or smaller openings and the closure is of similar design (e.g., screw cap, friction lid, etc.).

(iv) Sufficient additional cushioning material is used to fill void spaces and to prevent significant movement of the primary receptacles.

(v) Primary receptacles are oriented within the intermediate packaging in the same manner as in the tested package.

(2) Variation 2. A lesser number of the tested primary receptacles, or of the alternative types of primary receptacles identified in paragraph (i)(1) of this section, may be used provided sufficient

cushioning is added to fill the void space(s) and to prevent significant movement of the primary receptacles.

(3) Variation 3. Primary receptacles of any type may be placed within a secondary packaging and shipped without testing in the outer packaging provided all of the following conditions are met:

(i) The secondary and outer packaging combination must be successfully tested in accordance with paragraphs (a) through (h) of this section with fragile (e.g., glass) inner receptacles.

(ii) The total combined gross weight of inner receptacles may not exceed one-half the gross weight of inner receptacles used for the drop test in paragraph (d) of this section.

(iii) The thickness of cushioning material between inner receptacles and between inner receptacles and the outside of the secondary packaging may not be reduced below the corresponding thicknesses in the originally tested packaging. If a single inner receptacle was used in the original test, the thickness of cushioning between the inner receptacles must be no less than the thickness of cushioning between the outside of the secondary packaging and the inner receptacle in the original test. When either fewer or smaller inner receptacles are used (as compared to the [If inner receptacles used in the drop test)

sufficient additional cushioning material must be used to fill the void.

(iv) The outer packaging must pass the stacking test in § 178.606 while empty. The total weight of identical packages must be based on the combined mass of inner receptacles used in the drop test in paragraph (d) of this section.

(v) For inner receptacles containing liquids, an adequate quantity of absorbent material must be present to absorb the entire liquid contents of the inner receptacles.

(vi) If the outer packaging is intended to contain inner receptacles for liquids and is not leakproof, or is intended to contain inner receptacles for solids and is not sift proof, a means of containing any liquid or solid contents in the event of leakage must be provided. This can be a leakproof liner, plastic bag, or other equally effective means of containment.

(vii) In addition, the marking required in § 178.503(f) of this subchapter must be followed by the letter "U".

Issued in Washington, DC, on August 2, 2002, under authority delegated in 49 CFR part 106.

Ellen G. Engleman

Administrator, Research and Special Programs Administration.

BILLING CODE 4910-60-P

National Guidelines On Hospital Waste Management

The Bio-Medical Waste (Management & Handling) Rules 1998 were notified under the Environment Protection Act, 1986 (29 of 1986) by the Ministry of Environment and forest, Govt of India on 28th July 1998. The Guidelines have been prepared to enable each hospital for implementation of the said Rules by developing comprehensive plan for hospital waste management smoothly in terms of segregation, collection, treatment, transportation and disposal of hospital.

1. POLICY ON HOSPITAL WASTE MANAGEMENT.

The policy statement aims “to provide for a system for management of all potentially infectious and hazardous waste in accordance with the Bio Medical Waste (Management & Handling) Rules, 1998 (BMW, 1998).

2. DEFINITION OF BIO MEDICAL WASTE

Bio Medical waste means any waste, which is generated during the diagnosis treatment or immunization of human beings or animal or in research activities pertaining thereto or in the production or testing of biologicals, including categories mentioned in the Schedule I of the Bio-Medical waste (Management & Handling) Rules, 1998.

3. CATEGORIES OF BIO-MEDICAL WASTE.

Hazardous, toxic and Bio-medical waste should be segregated into following categories for the purpose of its safe transportation to a specific site for specific treatment. Certain specific categories of toxic and hazardous waste required specific treatment (dis-infection/ decontamination) before transportation for treatment, which can also be done under the categorization as mentioned below:

Category No.1- Human anatomical waste.

These contain human tissues, organs and body parts.

Category No. 2- Animal waste.

This contains animal tissue, organs, body parts carcasses, bleeding parts fluid blood and experimental animals used in research, waste generated by veterinary hospitals, colleges discharge from hospitals, animal houses.

Category No.3- Microbiology & Biotechnology Waste.

This contains waste from laboratory cultures, stocks or specimens of microorganisms live or attenuated vaccines, human and animal cell culture used in research and infectious agents from research and industrial laboratories, wastes from production of biologicals, toxins, dishes and devices used for transfer of cultures.

Category No. 4- Waste Sharps.

This contains needles, syringes, scalpels, blades, glass etc, which may cause puncture and cuts. This includes both used and unused sharps.

Category No. 5- Discarded Medicines and Cytotoxic drugs.

This contains waste comprising of outdated, contaminated and discarded medicines.

Category No. 6- Soiled Waste.

This contains items contaminated with blood, and body fluids including cotton, dressings, soiled plaster casts, linens, beddings, other material contaminated with blood.

Category No. 7- Solid Waste.

This contains wastes generated from disposable items other than the waste sharps such as tubing, catheters,

intravenous sets etc.

Category No. 8- Liquid Waste.

This contains wastes generated from laboratory and washing, cleaning housekeeping and disinfecting activities.

Category No. 9- Incineration Ash.

This contains ash from incineration of any bio-medical waste.

Category No. 10- Chemical Waste.

This contains chemical used in production of biologicals, chemicals used disinfection as insecticides etc.

4. SEGREGATION OF WASTE.

4.1 It should be done at the source of generation of bio medical waste e.g. all patient care activity areas, Diagnostic Services areas, Operation theatres, Labours Rooms, treatment rooms etc.

4.2 The responsibility of segregation should be with generator of bio medical waste i.e. Doctors, Nurses and Technicians etc.

4.3 The Bio Medical waste should be segregated as per categories applicable.

5. COLLECTION OF BIO MEDICAL WASTE.

Collection of Bio medical waste should be done as per Bio Medical Waste (Management & Handling) Rules, 1998 (Rule 6- schedule II)

5.1 Type of container and colour for collection of Biomedical waste:

Category	Type of Container	Colour Coding
i Human anatomical waste	Plastic Bag	Yellow
ii Animal waste	-do-	-do-
iii Microbiology & Bio-Technology waste	-do-	yellow/ red
iv Waste sharp	Plastic bag puncture proof container	Blue/White translucent
v Discarded Medicines & Cytotoxic waste	Plastic bag	Black
vi Solid waste (Soiled)	-do-	Yellow/ red
vii *Solid waste (Plastic)	Plastic bag puncture proof container	Blue/White translucent
viii Liquid waste	---	--
ix Incineration ash	Plastic bag	Black
x Chemical waste (solid)	-do-	Black

* Those plastics, which contain liquid, like blood, urine, pus etc should be put into red colour bag for microwaving and autoclaving and other items should be put into blue or white bag for chemical treatment and destruction/shredding.

5.2.i All the items sent to incinerator/deep burial (Cat 1,2,3,6) should be placed in Yellow coloured bags.

ii All the Bio-medical waste to be sent for Microwave/autoclave/Chemical treatment should be placed in Red coloured bags.

- iii Any waste which is sent shredder after autoclaving/microwaving/chemical treatment is to be packed in Blue/white translucent bag.
- iv Location of containers: -
All containers having different coloured plastic bags should be located at the point of generation of waste i.e. near OT Tables, injection rooms, diagnostic services areas.
- v The colour of container/plastic bags used for collection of segregated Biomedical waste should be identifiable.
- vi Labelling: - All the bags/containers must be labelled according to the rules (Schedule III of Bio Medical Waste Rules, 1998.
- vii Bags: It should be ensured that waste bags are filled up to only three fourth capacity, tie securely and remove from the site of the generation regularly and timely.
- viii Certain categories of waste, which may need pre-treatment (decontamination/disinfection) and the site of generation such as plastic and sharp materials, etc should be removed from the site of generation only after treatment.
- ix The process of collection should be documented in a register, the colour plastic bags should be replaced and the garbage bin should be cleaned with disinfectant regularly.

6. STORAGE OF WASTE.

Storage refers to the holding of Bio-medical waste for a certain period of time, after which it is sent for treatment and disposal. In other words it means the duration of time wastes are kept at the site of generation and transit till the point of treatment and final disposal.

- 6.1 No untreated Bio Medical Waste shall be kept, stored beyond a period of 48 hours
- 6.2 The authorised person must take the permission of the prescribed authority, if for any reason; it becomes necessary to store the waste beyond 48 hours.
- 6.3 The authorised person should take measures to ensure that the waste does not adversely affect human health and the environment, in case; it is kept beyond the prescribed limit.

7. TRANSPORTATION.

- 7.1 Transportation within the Hospital.
 - ii Within hospital, waste routes must be designated to avoid the passage of waste through patient care areas as far as possible
 - iii Separate time should be earmarked for transportation of Bio Medical Waste to reduce chances of its mixing with general waste as far as possible.
 - iv Dedicated wheeled containers, trolleys or carts should be used to transport the waste bins/ plastic bags to the site of storage/ treatment.
 - v Trolleys or carts should be thoroughly cleaned and disinfected in the event of any spillage.
 - vi The wheeled containers should be designated that the waste can be easily loaded, remains secured during transportation, does not have any sharp edges and easy to clean and disinfected.
 - vii Transportation of clinical waste to treatment/disposal outside the hospital.
- 7.2.i Untreated Bio Medical Waste shall be transported only in such vehicles as may be authorised for the purpose by the competent authority as specified by the Govt. under the Motor Vehicle Act, 1988.

- ii The containers for transportation must be labelled as given in Schedule III and IV of BMW Rules 1998.

8. TREATMENT OF HOSPITAL WASTE.

8.1 General waste (non-hazardous, non toxic, non infectious):

The safe disposal of this waste should be ensured by the/ through Local Municipal Authority.

8.2 Bio Medical Waste:

- i Incineration: The incinerator should be installed and made operational as per specifications under the BMW Rules, 1998 and a certificate may be taken from CPCB/State Pollution control Board. Specific requirement regarding the incinerator and norms of combustion efficiency and emission levels, etc have been defined in the Bio Medical Waste (management & Handling) Rules 1998. In case of small hospitals, joint facilities for incineration can be developed depending upon the local policies of the Hospital and feasibility. The plastic bags made of chlorinated plastic should not be incinerated.
- ii Deep Burial: Standard for deep burial is also mentioned in the Bio Medical Waste (management & Handling) Rules 1998. The waste under category 1 and 2 can be accorded deep burial and only in cities having less than 5 lakh populations.
- iii Autoclave and Microwave treatment: Standards for the autoclaving and Microwaving are also mentioned in the Bio Medical Waste (Management & Handling) Rules 1998. All equipment installed/ shared should meet these techniques. The waste under category 3,4,6 and 7 can be treated by these techniques.
- iv Shredding: The plastic (IV bottle, IV Sets, syringes, catheters etc) sharps (needles, blades, glass etc) should be shredded but only after chemical treatment/ microwaving/ autoclaving ensuring disinfection.
- v Needles destroyers can be used for disposal of needles directly without chemical treatment.
- vi Secured landfill: The incinerator ash, discarded medicines, cytotoxic substances and solid chemical waste should be treated by this option.
- vii It may be noted there are multiple options available for disposal of certain category of waste. The individual hospital can choose the best option depending treatment facilities available.
- viii Radioactive Waste: The management of the radioactive waste should be undertaken as per the guidelines of BARC.
- ix Liquid and Chemical Waste.

9. SAFETY MEASURES.

9.1 Personal Protection:

Hospitals and health care facilities have to ensure that the following personal protective equipment are provided.

- i Gloves
 - a Disposable vinyl gloves
 - b Latex surgical gloves for invasive procedures
 - c Heavy-duty rubber gloves up till elbow for cleaners.
- ii Masks: Simple and cheap deflector mask to prevent health care workers against aerosols and splashes. Incinerator staff should wear dust masks.
- iii Protective glasses.
- iv Plastic aprons.

iv Special footwear e.g. gum boots for Hospital waste handlers.

9.2 Immunization: Hepatitis B and Tetanus.

9.3 Reporting Accident & Spillages.

There should be a procedure for reporting accident or incidents and records should be kept. The report should include the nature of accident when and where it occurred and which staff were directly involved.

9.4 All the generators of Bio Medical Waste should adopt universal precautions and appropriate safety measures while doing therapeutic and diagnostic activities and also while handling the biomedical waste.

9.5 All the sanitation workers engaged in the handling and transporting should be made aware of the risks involved in handling the Bio Medical Waste.

10. TRAINING

10.1 The entire medical professional must be made aware of Bio Medical Waste (Management & Handling) Rules, 1998.

10.2 Each and every hospital must have well planned awareness and training programmes for all categories of personnel including administrators.

10.3 To make aware about safe hospital waste management practices.

10.4 Training should be conducted category wise and more emphasis should be given in training modules as per category of personnel.

10.5 Training should be conducted in appropriate language/medium and in an acceptable manner.

10.6 Wherever possible audiovisual material and experience trainers should be used.

10.7 Training should be interactive and should include awareness sessions, demonstration sessions. Behavioral science approach should be adopted with emphasis on establishing proper practices. It is a continuous process and will need constant reinforcement.

11. MANAGEMENT & ADMINISTRATION

11.1 The Head of the Hospital shall form a Waste Management Committee under his Chairmanship. The waste Management committee shall meet regularly to review the performance of the waste disposal. This committee should be responsible for making hospital specific action plan for hospital waste management and its supervision, monitoring and implementation.

11.2 The Heads of each hospital will have to take authorization for generation of waste from appropriate authorities as notified by the concerned State/U.T. Government well in time and get it renewed as per time schedule laid in the rules. The application is to be made as per format given in form I of BMW rules.

11.3 The annual reports, accident reporting as required under BMW Rules should be submitted to the concerned authorities as per BMW Rules format (form II and form III respectively).

12. COORDINATION BETWEEN HOSPITAL & OUTSIDE AGENCIES

12.1 Municipal authorities: As quite a large percentage of waste (in India up to 90%) generated in Indian hospital belong to general category (non-toxic and non-hazardous), hospital should have constant interaction with municipal authorities so that this category of waste is regularly taken out of the hospital premises for further disposal.

12.2 Coordinated efforts should be made by health authorities and municipal authorities to involve private sector / NGOs for creation of common facilities for treatment.

- 12.3 Health authorities in coordination with municipal authorities should facilitate optimal utilization of waste treatment facility in the area.
- 12.4 Coordination with NGOs and Environmental Groups: For public awareness and education.
- 12.5 Sharing of facility: Hospitals which are not on possession of their own facility for treatment may get their waste treated in a shared facility. The hospitals having excess for treatment should extend the capacity to nearby smaller hospital or health care units.
- 12.6 There should be coordinated agencies to take care of exigencies/disruption of waste treatment equipment in a unit.

Guidelines for Design and Construction of Bio-Medical Waste Incinerator

1. General

- 1.1 These guidelines shall be applicable only to the new installation of incinerators. However, the existing incinerator shall be retrofitted with Air Pollution Control Device as mentioned in these guidelines.
- 1.2 Incinerator shall be allowed only at common Bio-Medical Waste treatment facility (CBWTF)
- 1.3 Installation of individual incineration facility by a health care unit shall be discouraged as far as possible but approval may be granted only in certain inevitable situations where no other option is available.

2. Incinerator

Following design criteria may be adopted for better performance:

- 2.1 The incinerator shall be designed to capacity more than 50 kg/hr. For 50kg/hr capacity, the minimum hearth area shall be 0.75 sq m (8 sq feet) and the minimum flow of the flue gas in the Secondary chamber shall be 0.6 m³ /sec at 1050 C. Each incinerator must be installed with an air pollution control system (as specified in the section 3).
- 2.2 The size of the opening through which the waste is charged shall be larger than the size of the waste bag to be fed. The volume of the primary chamber shall be at least five times the volume of one batch.
- 2.3 The double chamber incinerator shall preferably designed on "controlled air" incineration principle, as particulate matter emission is low in such incinerator. Minimum 100% excess air shall be used for all over design. Air supply in the primary & secondary chamber shall be regulated between 30% - 80% and 170% - 120% of stoichiometric amount respectively. Primary air shall be admitted near/at the hearth for better contact. Flow meter/suitable flow measurement device shall be provided on the primary & secondary air ducting. The combustion of air shall be supplies through a separate forced draft fan after accounting for the air supplies through burners.

Optional: for higher capacity incinerators, typically above 250Kg/hr, other design e.g. Rotary Kiln shall be preferred.
- 2.4 A minimum negative draft of 1.27 to 2.54 mm of WC (Water Column) shall be maintained in the primary chamber to avoid leakage of gaseous emissions from the chamber and for safely reasons. Provisions shall be made in the primary chamber to measure the Water Column Pressure.
- 2.5 The waste shall be fed into the incinerator in small batches after the fixed interval of time in case of fixed hearth incinerator and continuous charging using appropriate feeding mechanism in case of rotary kiln incinerator or as recommended by the manufacturer. The size of the hearth i. e. primary chamber shall be designed properly.
- 2.6 The sides and the top portion of the primary & secondary chambers shall preferably have rounded corner from inside to avoid possibility of formation of black pockets/dead zones.
- 2.7 The size of the secondary chamber shall be properly designed so as to facilitate a minimum of 1sec of residence time to gas flow. For the estimation of residence time in the secondary chamber its volume shall be calculated from the secondary burner tip to the thermocouple.
- 2.8 The refractory lining of the chamber shall be strong enough to sustain minimum temperature of 10000 C in

the primary chamber and 1200 C in the secondary chamber. The refractory and insulation bricks shall have minimum 150 mm thickness each & confirm to IS: 8 1983 & IS: 2042-1972 respectively.

- 2.9 The incinerator shall be made of mild steel plate of adequate thickness (minimum 5 mm thick) and painted externally with heat resistant aluminum paint suitable to withstand temperature of 2500 C with proper surface preparation. Refractory lining of hot ducted shall be done with refractory castable (minimum 45 mm thick) & insulating castable (minimum 80 mm thick). Ceramic wool shall be used at hot duct flanges & expansion joints.
- 2.10 The thermocouple location shall be as follows:
- | | |
|----------------------|---|
| In Primary Chamber | - Before admission of secondary air |
| In Secondary Chamber | - At the end of Secondary Chamber or before admission of dilution medium to cool the gas. |
- 2.11 There shall be a separate burner each for the Primary & Secondary chamber. The heat input capacity of each burner shall be sufficient to raise the temperature in the primary & secondary chambers as $800 \pm 50^{\circ}\text{C}$ and $1050 \pm 50^{\circ}\text{C}$ respectively within maximum of 60 minutes prior to waste charging. The burners shall have automatic switching "off/on" control to avoid the fluctuations of temperatures beyond the required temperature range.
- a. Each burner shall be equipped with spark igniter and main burner.
 - b. Proper flame safeguard of the burner shall be installed.
 - c. Provide view ports to observe the flame of the burner.
 - d. Flame of the primary burners
 - i. Shall be pointing towards the centre of the hearth.
 - ii. Shall be having a length such that it touches waste but does not impinge directly on the refractory floor or wall.
 - e. The secondary burner shall be positioned in such a way that the gas passes through the flame.
- 2.12 There shall not be any manual handling during charging of waste in to the primary chamber of the incinerator. The waste shall be charged in bags through automatic feeding device at the manufacturer's recommended intervals ensuring no direct exposure of furnace atmosphere to the operator. The device shall prevent leakage & any backfire. The waste shall be introduced on the hearth such a way so as to prevent the heap formation. Suitable taking arrangement shall be provided for uniform spreading of waste on the hearth.
- 2.13 A tamper proof PLC (Programmable Logic Control) based control system shall be installed to prevent:
- a. Waste charging until the required temperature in the chambers are attained during beginning of the operation of the incinerator
 - b. Waste charging unless primary & Secondary chambers are maintained at the specified temperature range
 - c. Waste charging in case of any unsafe conditions such as very high temperature in the primary & secondary chambers; failure of the combustion air fan, ID fan, recirculation pump, low water pressure and high temperature of the flue gas at the outlet of the air pollution control device.
- 2.14 The incineration system must have an emergency vent. The emergency vent shall remain closed i. e. it shall not emit flue gases during normal operational of the incinerator.

- 2.15 Each incineration system shall have graphic or computer recording devices, which shall automatically and continuously monitor & record dates, time of day, batch sequential number and operating parameters such as temperature in both the chambers. CO, CO₂ & O₂ in gaseous emission shall also be measured daily (at least 1/2hour at one minute interval).
- 2.16 The possibility of providing heat recovery system/heat exchanger with the incinerator shall also be considered wherever possible.
- 2.17 Structural design of the chimney/stack shall be as per IS: 6533-1989. The chimney/stack shall be from inside with minimum of 3 mm thick natural hard rubber suitable for the duty conditions and shall also confirm to IS: 4682 Part I 1968 to avoid corrosion due to oxygen and acids in the flue gas.
- 2.18 The location & specification of porthole, platform ladder etc. shall be as per the Emission Regulations, Part 3 (COINDS/20/1984 85), published by CPCB.

3. Air Pollution Control Device

It is not possible to comply with the emission limit of 150 mg/Nm³ (corrected to 12% CO₂) for particulate matter without Air Pollution Control Device (APCD). Therefore a Bio-medical Waste incinerator shall always be equipped with APCD:

- 3.1 No incinerator shall be allowed to operate unless equipped with APCD
- 3.2 The incinerator shall be equipped with High Pressure Venturi Scrubber System as ordinary APCD such as wet scrubber or cyclonic separator cannot achieve the prescribed emission limit. For the facilities operating for 24 hrs a day, APCD in terms of dry lime injection followed by bag filter can be considered. The details of High Pressure Venturi Scrubber System are given in Annexure I.
 - a. Incinerator Room and Waste Storage Room
 - i The incinerator structure shall be built in a room with proper roofing and cross ventilation. There shall be minimum of 1.5 m clear distance in all the directions from the incinerator structure to the wall of the incinerator room.
 - ii Adjacent to the incinerator room, there shall be a waste storage area. It shall be properly ventilated and so designed that waste can be stored in racks and washing can be done very easily. The waste storage room shall be washed and chemically disinfected daily.
 - iii The floor and inner wall of the incinerator and storage rooms shall have outer covering of impervious and glazed material so as to avoid retention of moisture and for easy cleaning.
 - iv The incineration ash shall be stored in a closed sturdy container in a masonry room to avoid any pilferage. Finally, the ash shall be disposed in a secured landfill.
 - b Operator of the Incinerator
 - i A skilled person shall be designated to operate and maintain the incinerator. The operator shall have adequate qualification in relevant subject and shall be trained and certified by the incinerator supplier in operation & maintenance of the incinerator.
 - ii There shall be at least one assistant designated at the incinerator plant to keep track of wastes, records of incinerator operation, cleanliness of the surrounding area and incinerator & Waste storage room. They shall also take care of waste charging and incineration ash disposal.
 - iii All the staff at the incinerator plant shall put on protective gears such as gumboots, gloves, eyeglasses etc. for safety reasons.

- iv Any accident occurred shall immediately be reported to the facility operator. The facility operator shall have well defined strategies to deal with such accident/emergency.

Note: The guidelines will help in selection/installation of better incinerator system. The incinerator shall comply with the standards stipulated in Bio-Medical Waste (Management & Handling) Rules, 1998.

NOTIFICATION

New Delhi, 20th July 1998

S.O. 630 (E). Whereas a notification in exercise of the powers conferred by section 6, 8 and 25 of the Environment (Protection) Act 1986 (29 of 1986) was published in the Gazette vide S.O. 746 (E) dated 16th October, 1997 inviting objections from the public within 60 days from the date of publication of the said notification on the Bio-Medical Waste (Management and Handling) Rules, 1998 and whereas all objections received were duly considered:

Now, therefore, in exercise of the powers conferred by section 6, 8 and 25 of the Environment (Protection) Act, 1986 the Central Government hereby notifies the rules for the management and handling of bio-medical waste.

1. SHORT TITLE AND COMMENCEMENT:

- a. These rules may be called the Bio-Medical Waste (Management and Handling) Rules, 1998.
- b. They shall come into force on the date of their publication in the official Gazette.

2. APPLICATION

These rules apply to all persons who generate, collect, receive, store, transport, treat, dispose, or handle bio-medical waste in any form.

3. DEFINITION: In these rules unless the context otherwise requires:

- a. "Act" means the Environment (Protection) Act, 1986 (29 of 1986)
- b. "Animal House" means a place where animals are reared/ kept for experiments or testing purpose.
- c. "Authorisation" means permission granted by the prescribed authority for the generation, collection, reception, storage, transportation, treatment, disposal and/or any other form of handling of bio-medical waste in accordance with these rules and any guidelines issued by the Central Government.
- d. "Authorized person" means an occupier or operator authorized by the prescribed authority to generate, collect, receive, store, transport, treat, dispose and/or handle Bio-Medical waste in accordance with these rules and any guidelines issued by the Central Government.
- e. "Bio-medical waste" means any waste, which is generated during the diagnosis, treatment or immunization of human beings or animals or in research activities pertaining thereto or in the production or testing of biologicals and including categories mentioned in schedule I.
- f. "Biologicals" means any preparation made from organisms or micro organisms or product of metabolism and biochemical reactions intended, for use in the diagnosis, immunization or treatment of human beings

or animals or in the research activities pertaining thereto.

- g. "Bio-medical waste treatment facility" means any facility wherein treatment or disposal of bio-medical waste or processes incidental to such treatment or disposal is carried out.
- h. "Occupier" in relation to any institution generating Bio-Medical waste, which includes a hospital, nursing home, clinic dispensary, veterinary institution, animal house, pathological laboratory, blood bank by whatever name called means a person who has control over that institution and/or its premises.
- i. "Operator of a bio-medical waste facility" means a person who owns or controls or operates a facility for the collection, reception, storage, transport, treatment, dispose or handling of Bio-Medical waste.
- j. "Schedule" means schedule appended to these rules:

4. DUTY OF THE OCCUPIER:

It shall be the duty of every occupier of an institution generating Bio-Medical Waste which includes a hospital, nursing home, clinic dispensary, veterinary institution, animal house, pathological laboratory, blood bank by whatever name called to take all the steps to ensure that such waste is handled without any adverse effect to human health and the environment.

5. TREATMENTS AND DISPOSAL:

- a. Bio-Medical Waste shall be treated and disposed of in accordance with Schedule I, and in compliance with the standards prescribed in Schedule V
- b. Every Occupier, where required shall set up in accordance with the time schedule in Schedule VI, requisite Bio-Medical Waste Treatment facilities like incinerator, autoclave, microwave system for the treatment of waste, or ensure requisite treatment of waste at a common waste treatment facility or any other Waste treatment facility.

6. SEGREGATION, PACKAGING, TRANSPORTATION AND STORAGE:

- a. Bio-Medical waste shall not be mixed with other means.
- b. Bio-Medical Waste shall be segregated into containers/bags at the point of generation in accordance with schedule II prior to its storage, transportation, treatment and disposal. The containers shall be labelled according to schedule III.
- c. If a container is transported from the premises where Bio-Medical Waste is generated to any waste treatment facility outside the premises, the container shall, apart from the label prescribed in Schedule III, also carry information prescribed in Schedule IV.
- d. Notwithstanding anything contained in the Motor Vehicles Act, 1988, or rules there under, untreated Bio-Medical Waste shall be transported only in such vehicle as may be authorized for the purpose by the Competent authority as specified by the government.
- e. No untreated Bio-Medical Waste shall be kept stored beyond a period of 48 hours.
- f. Provided that if for any reason it becomes necessary to store the waste beyond such period, the authorized person must take permission of the prescribed authority and take measures to ensure that the waste does not adversely affect human health and environment.

7. PRESCRIBED AUTHORITY

- a. The Government of every State and Union Territory shall establish a prescribed authority with such members as may be specified for granting authorization and implementing these rules. If the prescribed

authority comprises of more than one member, a chairperson for the authority shall be designated.

- b. The prescribed authority for the State of Union Territory shall be appointed within one month of the coming into force of these rules.
- c. The prescribed authority shall function under the supervision and control of the respective Government of the State or Union Territory.
- d. The prescribed authority shall on receipt of form I make such enquiry as it deems fit and if it is satisfied that the applicant possesses the necessary capacity to handle bio-medical waste in accordance with these rules, grant or renew an authorisation as the case may be.
- e. An authorization shall be granted for a period of three years, including an initial trial period of one year from the date of issue. Therefore, an application shall be made by the occupier/operator for renewal. All such subsequent authorization shall be for a period of three years. A provision authorization will be granted for the trial period, to enable the occupier/operator to demonstrate the capacity of the facility.
- f. The prescribed authority may after giving reasonable opportunity to begin heard to the application and for reasons thereof to be recorded in writing, refuse to grant or renew authorization.
- g. Every application for authorization shall be disposed of by the prescribed authority within ninety days from the date of receipt of the application.
- h. The prescribed authority may cancel or suspend an authorization, if for the reasons, to be recorded in writing, the occupier/operator has failed to comply with any provision of the Act of these rules:

Provided that no authorization shall be cancelled or suspended without giving a reasonable opportunity to the occupier/operator of being heard.

8. AUTHORIZATION

- a. Every occupier of an institution generating, collecting, receiving, storing, transporting, treating, disposing and/or handling bio-medical waste in any other manner except such occupier of clinics, dispensaries, pathological laboratories, blood banks providing treatment/service to less than 1000 (one thousand) patients per month shall make an application in form I to the prescribed authority for grant of authorization.
- b. Every operator of a bio- medical waste facility shall make an application in Form I to the prescribed authority for grant of authorization.
- c. Every application in Form I for grant of authorization shall be accompanied by a fee as may be prescribed by the Government of the State or Union Territory.

9. ADVISORY COMMITTEE

The Government of every State/Union Territory shall constitute an advisory committee. The committee will include experts in the field of medical and health, animal husbandry and veterinary sciences, environmental management, municipal administration and any other related department or organizations including non-governmental organizations. The State Pollution Control Board/Pollution Control Committee shall be represented. As and when required, the committee shall advise the Government of the State/Union Territory and the prescribed authority about matters related to the implementation of these rules.

10. ANNUAL REPORT

Every occupier/operator shall submit an annual report to the prescribed authority in form II by 31 January every

year, to include information about the categories and quantities of bio-medical wastes handled during the preceding year. The prescribed authority shall send this information in a compiled form to the Central Pollution Control Board by 31st March every year.

11. MAINTENANCE OF RECORDS

- a. Every authorized person shall maintain records related to the generation, collection reception, storage, transportation, treatment, disposal and or any form of handling of bio-medical waste in accordance with these rules and any guidelines issued.
- b. All records shall be subject to inspection and verification by the prescribed authority at any time.

12. ACCIDENT REPORTING

When any accident occurs at any institution or facility or any other site where bio-medical waste is handled or during transportation of such waste, the authorized person shall report the accident in form III to the prescribed authority forthwith.

13. APPEAL

Any person aggrieved by an order made by the prescribed authority under these rules may, within thirty days from the date on which the order is communicated to him, prefer an appeal to such authority as the Government of State/Union Territory may think fit to constitute:

Provided that the authority may entertain the appeal after the expiry of the said period of thirty days if it is satisfied that the appellant was prevented by sufficient cause from filling the appeal in time

SCHEDULE-I CATEGORIES OF BIO-MEDICAL WASTE

Option	Waste Category	Treatment & Disposal
Category No. 1	Human Anatomical Waste (human, tissues, organs, body parts)	incineration @ deep burial*
Category No. 2	Animal Waste (animal tissues, organs, body parts carcasses, bleeding parts, fluid, blood & experimental animals used in research, waste generated by veterinary hospitals, colleges, discharge from hospitals, animal houses)	incineration @ deep burial*
Category No. 3	Microbiology & Biotechnology Waste (wastes from laboratory cultures, stocks or micro organisms live or vaccines, human and animal cell, culture used in research and infectious agents from research & industrial laboratories, wastes from production of Biologicals, toxins, dishes and devices used for transfer of cultures)	Local autoclaving/ micro waving/incineration @
Category No.4	Waste Sharps (needles, syringes, scalpels, blade, glass etc. that may cause puncture and cuts. This includes both used & unused sharps)	Disinfection by chemical treatment @@@ / auto claving /microwaving and mutilation/shredding # #
Category No. 5	Discarded Medicines and Cytotoxic Drugs	Incineration @/destruction

BIO-MEDICAL WASTE STATUS REPORT 2006

	(waste comprising of outdated, contaminated and discarded medicines)	and drugs disposal in secured landfills
Category No. 6	Soiled Waste (Items contaminated with blood, and body fluids including cotton, dressings, soiled plaster casts, lines, bedding, other material contaminated with blood)	Incineration @ autoclaving/micro waving
Category No. 7	Solid Waste (Disposables) (waste generated from disposable items other than the sharps such as tubing's, catheters, intravenous sets etc)	Disinfection by chemical treatment @@ /auto claving/microwaving and mutilation/shredding # #
Category No.8	Liquid Waste (waste generated from laboratory and washing, cleaning house keeping and disinfecting activities)	Disinfection by chemical treatment @@ and discharge into drains
Category No. 9	Incinerator Ash (Ash from incineration of any bio-medical waste)	Disposal in municipal landfill
Category NO. 10	Chemical Waste (Chemicals used in production of biologicals, chemicals used in Disinfection, as insecticides etc.)	Chemical treatment @@ and discharge into drains for liquids and secured landfill for solids

@ @ Chemicals treatment using at least 1% hypochlorite solution or any other equivalent chemical reagent.

It must be ensured that chemical treatment ensures disinfection.

Mutilation/Shredding must be such so as to prevent unauthorized reuse.

@ There will be no chemical pre-treatment before incineration. Chlorinated plastics shall not be incinerated.

* Deep Burial shall be an option available only in towns with population less than five Lakhs and in rural areas

SCHEDULE-II : COLOR CODING AND THE TYPE OF CONTAINER FOR DISPOSAL OF BIO-MEDICAL WASTES

Color Coding	Type of Container	Waste category	Treatment options as per Schedule I
Yellow	Plastic Bag	Cat.1, Cat. 2 & Cat. 3, Cat. 6	Incineration/ Deep Burial
Red	Disinfected Container/ Plastic Bag	Cat.3, Cat. 6 and Cat. 7	Autoclaving/Micro waving/ Chemical Treatment
Blue/white Translucent	Plastic bag/ puncture proof container	Cat. 4, Cat. 7	Autoclaving/Micro waving/ Chemical Treatment and destruction/shredding
Black	Plastic Bag	Cat. 5 and Cat. 9 and Cat. 10 (solid)	Disposal in secured landfill

Notes:

- Color coding of Waste categories with multiple treatment options as defined in Schedule I, shall be selected depending on treatment option chosen, which shall be as specified in Schedule I
- Waste Collection Bags for Waste types needing incineration shall not be made of chlorinated plastics.
- Categories 8 and 10 (liquid) do not require containers/bags.
- Category 3 if disinfected locally need not be put in containers/bags.

SCHEDULE III

LABEL FOR BIO-MEDICAL WASTE CONTAINERS/BAGS

Biohazard Symbol

Biohazard

HANDLE WITH CARE

Cytotoxic Symbol

Cytotoxic

Note: Label shall be non-washable and prominently visible

SCHEDULE IV

(See rule 6)

LABEL FOR TRANSPORT OF BIO-MEDICAL WASTE CONTAINER/BAGS

Waste Category No.....	Day..... Month.....
Waste Class	Year.....
Waste Description	Date of Generation.....
Sender's Name & Address	Receiver's Name & Address
Phone No.....	Phone No.....
Telex No.....	Telex No.....
Fax No.....	Fax No.....
Contact Person.....	Contact Person.....
In case of emergency please contact:	
Name & Address:	
Phone No.:	
Note:	
Label shall non-washable and prominently visible.	

SCHEDULE V

(See rule 5 & Schedule I)

STANDARD FOR TREATMENT AND DISPOSAL OF BIO-MEDICAL WASTE

1. STANDARDS FOR INCINERATIONS:

All incinerators shall meet the following operating and emission standards:

A. Operating Standards

Combustion Efficiency (CE) shall be at least 99.00%

The combustion Efficiency shall be computed as follows:

$$C.E. = \{(\%CO_2) / (\%CO_2 + \%CO)\} * 100$$

The temperature of the primary chamber shall be 800±50 deg. C

The Secondary Chamber gas residence time shall be at least 1 (one) second at 1050±50 deg. C, with minimum 3% Oxygen in the stack gas

B. Emission Standards

Parameters	Concentration mg/Nm ³ at (12% CO ₂ correction)
I. Particulate matter	150
II. Nitrogen Oxides	450
III. HCl	50
IV. Minimum stack height shall be 30 meters above ground	
V. Volatile Organic Compounds in ash shall not be more than 0.01%	

Note:

- Suitably designed pollution control devices should be installed/retrofitted with the incinerator to achieve the above emission limits if necessary.
- Wastes to be incinerated shall not be chemically treated with any chlorinated disinfectants.
- Chlorinated plastics shall not be incinerated.
- Toxic metals in incineration ash shall be limited within the regulatory quantities as defined under the Hazardous Waste (Management and Handling Rules), 1989.
- Only low Sulphur fuel like L.D.O./ L.S.H.S./Diesel shall be used as fuel in the incinerator.

2. STANDARDS FOR WASTE AUTOCLAVING:

The autoclave should be dedicated for the purposes of disinfecting and treating bio-medical waste.

a. When operating a gravity flow autoclave, medical waste shall be subjected to:

- A temperature of not less than 121°C and pressure of 15 pounds per square inch (psi) for an autoclave residence time of not less than 60 minutes or
- A temperature of not less than 135°C and a pressure of 31 psi for an autoclave residence time of not less than 45 minutes or
- A temperature of not less than 149°C and a pressure of 52 psi for an autoclave residence time of not less than 30 minutes

b. When operating a vacuum autoclave, medical waste shall be subjected to a minimum of one pre vacuum pulse to purge the autoclave of all air. The waste shall be subjected to the following:

- A temperature of not less than 121deg C and a pressure of 15 psi for an autoclave residence time of not less than 45 minutes: or
 - A temperature of not less than 135 deg C and a pressure of 31 psi for an autoclave residence time of not less than 30 minutes.
- c. Medical waste shall not be considered properly treated unless the time, temperature and pressure indicators indicate that the required time, temperature and pressure were reached during the autoclave process. If for any reasons, time, temperature or pressure indicator indicates that the required temperature, pressure or residence time was not reached, the entire load of medical waste be autoclaved again until the proper temperature, pressure and residence time were achieved.
- d. Recording of Operational Parameters:
Each Autoclave shall have graphic or computer recording devices that will automatically and continuously monitor and record dates, time of day, load identification no. and operating parameters throughout the entire length of the autoclave cycle.
- e. Validation Test
Spore Testing:
The autoclave should completely and consistently kill the approved biological indicator at the maximum design capacity of each autoclave unit. Biological indicator for autoclave shall be a Bacillus stearothermophilus spore using vials or spore strips, with at least 1×10^4 spores per millilitre. Under no circumstances will an autoclave have minimum operating parameters less than a residence time of 30 minutes, regardless of temperature and pressure, a temperature less than 121 C or a pressure less than 15 psi.
- f. Routine Test
A chemical indicator strip/trap that changes colour when a certain temperature is reached can be used to verify that a specific temperature has been achieved. It may be necessary to use more than one strip over the waste package at different location to ensure that the inner content of the package has been adequately autoclaved.

3. STANDARDS FOR LIQUIDWASTE

The effluent generated from the hospital should confirm to the following limits:

Parameters	Permissible Limits
PH	6.5-.9.0
Suspended Solids	100 mg/1
Oil and Grease	10 mg/1
BOD	30 mg/1
COD	250 mg/1
Bio-assay test	90% survival of fish after 96 hours in 100% effluent

These limits are applicable to those hospitals, which are either connected with sewers without terminal sewage treatment plant or not connected to public sewers. For discharge into public sewers with terminal facilities, the general standards as notified under the Environment (Protection) Act, 1986 shall be applicable.

4. STANDARDS OF MICROWAVING:

- a. Microwave treatment shall not be used for Cytotoxic, hazardous or radioactive wastes, contaminated animal carcasses, body parts and large metal items.
- b. The microwave system shall comply with the efficiency test/routine tests and a performance guarantee may be

provided by the supplier before operation of the unit.

- c. The microwave should completely and consistently kill the bacteria and other pathogenic organisms that is ensured by approved biological indicator at the maximum design capacity of each microwave unit, biological indicator at the maximum design capacity of each microwave unit. Biological indicators for microwave shall be Bacillus Subtilis spores using vials or spore strips with at least 1×10^4 spores per millimeter.

5. STANDARDS FOR DEEP BURIAL

- a. A pit or trench should be dug about 2 meters deep. It should be half filled with waste, then covered with lime within 50 cm of the surface, before filling the rest of the pit with soil.
- b. It must be ensured that animals do not have any access to burial sites. Covers of galvanized iron/wire meshes may be used.
- c. On each Occasion, when wastes are added to the pit, a layer of 10 cm of soil shall be added to over the wastes.
- d. Burial must be performed under close and dedicated supervision
- e. The deep burial site should be relatively impermeable and no shallow well should be close to the site.
- f. The pits should be distant from habitation, and sited so as to ensure that no contamination occurs of any surface water or ground water. The area should not be prone to flooding or erosion.
- g. The location of the deep burial site will be authorized by the prescribed authority
- h. The institution shall maintain a record of all pits for deep burial

SCHEDULE VI

(See Rule 5)

Schedule for Waste Treatment Facilities Like Incinerator/Autoclave/Microwave System

- | | | |
|----|--|-----------------------------------|
| A. | Hospital & Nursing homes in towns with population of 30 Lakhs and above | By 31st December, 1999 or earlier |
| B. | Hospital & Nursing Homes in towns with population of below 30 Lakhs | |
| | • With 500 beds and above | By 31st December, 1999 or earlier |
| | • With 200 beds and above but less than 500 beds | By 31st December, 2000 or earlier |
| | • With 50 beds and above but less than 200 beds | By 31st December, 2001 or earlier |
| | • With Less than 50 beds | By 31st December, 2002 or earlier |
| C. | All other institutions generating Bio -Medical Waste not included in A and B | By 31st December, 2002 or earlier |

FORM I

(See Rule 8) Application for Authorization (To be submitted in Duplicate)

To

The Prescribed Authority
Name of the Govt/UT Administration)
Address

1. Particulars of the Applicant

I) Name of the Applicant:
(In block letters & in full)

II) Name of the Institution
Address:

Tele No., Fax No., Telex No.

2. Activity for which authorization is sought

1. Generation 2. Collection 3. Reception 4. Storage
5. Transportation 6. Treatment 7. Disposal Any other form of handling

3. Please state whether applying for fresh authorization or for renewal:
(in case of renewal previous authorization- number and date)

4. I. Address of the Institution handling Bio-MedicalWastes:
II. Address of the place of the treatment facility:
III. Address of the place of disposal of the Waste

5. I. Mode of transportation (in any) of bio-medical Waste:
II. Mode (s) for treatment:

6. Brief Description of method of treatment and disposal (attach details):

7. I. Category (see Schedule I) of waste to be handled
II. Quantity of Waste (category wise) to be handled per month.

8. Declaration

I do hereby declare that the statements made and information given above are true to the best of my knowledge and belief that I have not concealed any information

I do also hereby undertake to provide any further information sought by the prescribed authority in relation to these rules and to fulfill any conditions stipulated by the prescribed authority

Date: Signature of the Applicant
Place: Designation of Applicant

The Fee Structure Notified By Delhi
Pollution Control Committee

S No.	Type of Health Care Institutions/facility	Fee (in Rs.)
1.	Clinics, Pathological Labs and Blood banks	Rs. 1000/- per annum
2.	Veterinary Institutions, dispensaries and Animal Houses	Rs. 1000/- per annum
3.	Hospitals, Nursing Homes and Health Care Establishment	Rs. 1000/- per annum up to 4 beds and additional Rs. 100 per bed per annum from fifth bed onwards
4.	Operator of the facility of Bio -Medical Waste (excluding participation)	Rs. 10000/- per annum
5.	Transporters of Bio-Medical Waste	Rs. 7500/- per annum

**DEPARTMENT OF ENVIRONMENT:
NOTIFICATIONS
Delhi, the 6th July 1999**

No. F 23(322)/95/EN/99 In exercise of the powers conferred by Rule 7 of the Bio-Medical Waste (Management & Handling), Rules, 1998, the Lt. Governor of Delhi is pleased to notify the prescribed authority and to appoint the Chairman, Delhi Pollution Control Committee to act as such authority under the said rules for the NCT of Delhi with immediate effect.

No. F 23(322)/95/EN/99, In exercise of the powers conferred by Rule 9 of the Bio-Medical Waste (Management & Handling) rules, 1998 the Lt. Governor of Delhi is pleased to constitute an Advisory Committee to act such authority under the said Rules. The composition of the advisory committee shall be as follows:

- | | | |
|-----|---|---------------------------|
| 1. | Pr. Secretary (Health)
Govt. of Delhi | Chairman |
| 2. | Dy. Commissioner (Health)/ MHO
Municipal Corporation of Delhi, Town Hall, Delhi-06 | Member |
| 3. | Chief Medical Officer, NDMC | Member |
| 4. | Director (Animal Husbandry)
Govt. of Delhi | Member |
| 5. | Sh. Ravi Aggarwal
Srishti, NGO | Member |
| 6. | Member Secretary
Delhi Pollution Control Committee | Member |
| 7. | Dr. Prem Aggarwal
Sanjeevan Medical College,
24, Ansari Road, Darya Ganj,
New delhi-02 | Member |
| 8. | Dr. Vijay Aggarwal
Oberoi Apartments, Cottage No.15,
2, sham Nath Marg, Delhi | Member |
| 9. | Dr. Sudershan Vaid
Vaid maternity Nursing Home,
1/4992, Loni Road, Shahdara,
Delhi110032 | Member |
| 10. | Director, Health Services | Member Secretary/Convenor |

The committee shall meet periodically from time to time discuss and decide about various issues Connected with these rules

No. F 23(322)/95/EN/99, In exercise of the powers conferred by Rule 13 of the Bio-Medical Waste (Management & handling Rules, 1998, the Lt. Governor of Delhi is pleased to constitute Appellate authority and appoint the Financial Commissioner, Govt. of Delhi as the said authority to entertain the appeal against the order passed under Rule 7 of the Bio-Medical Waste (Management & Handling) rules, 1998 and to dispose off the Appeal.

The Gazette of India

Extraordinary

Part - II, Section 3, Subsection-(ii)

Published by Authority

New Delhi, Tuesday March -7, 2000/Phalgun 17, 1921

S.O.201 (E) -In exercise of the powers conferred by section 6, 8 and 25 of the Environment (Protection) Act 1986(29 of 1986), the Central government hereby makes the following rules further to amend the Bio-Medical Waste (Management & Handling), Rules 1998, namely:

1. I. These rules may be called the Bio-Medical Waste (Management & Handling) (Amendment) Rules, 2000.
II. They shall come into force on the date of their publication in the Official Gazette
2. In the Bio-Medical Waste (Management & Handling), Rules 1998, for schedule VI, the following Schedule VI shall be substituted, namely:

SCHEDULE VI

(See Rule 5)

Schedule for Waste Treatment Facilities Like
Incinerator/Autoclave/Microwave System

- | | |
|---|-----------------------------------|
| A. Hospital & Nursing homes in towns with population of 30 Lakhs and above | By 30th June 2000 or earlier |
| B. Hospital & Nursing Homes in towns with population of below 30 Lakhs | |
| • With 500 beds and above | By 30th June 2000 or earlier |
| • With 200 beds and above but less than 500 beds | By 31st December, 2000 or earlier |
| • With 50 beds and above but less than 200 beds | By 31st December, 2001 or earlier |
| • With Less than 50 beds | By 31st December, 2002 or earlier |
| C. All other institutions generating Bio -Medical Waste not included in A and B above | By 31st December, 2002 or earlier |

The Gazette of India

EXTRAORDINARY

PART II SECTION 3 Sub Section (ii)

PUBLISHED BY AUTHORITY

NEW DELHI, Friday June 2, 2000/Jyastha 12, 1922

MINISTRY OF ENVIRONMENT AND FORESTS

NOTIFICATION

New Delhi, 2nd June 2000

S.O. 454 (E) In exercise of the powers conferred by sections 6, 8 and 25 of the Environment (Protection) Act, 1986 (29 of 1986), the Central Government hereby makes the following rules further to amend the Bio-Medical Waste (Management & Handling) Rules, 1998, namely:-

1. a. These rules may be called the Bio-Medical Waste (Management & Handling) (Second Amendment) Rules, 2000.
b. They shall come into force on the date of their publication in the Official Gazette.
2. In the Bio-Medical Waste (Management & Handling) Rules, 1998 (herein after referred to as the said rules), in rule 3, --
 - a. in clause (7), after the words "carried out" the words "and includes common treatment facilities," shall be added.
 - b. after clause (7), the following clause shall be inserted, namely: -
(7a) "Form" means Form appended to these rules;
3. In the said rules, in rule 6, after sub-rule (5), the following sub-rule shall be inserted, namely: -
"(6) The Municipal Body of the area shall continue to pick up and transport segregated non bio-medical solid waste generated in hospitals and nursing homes, as well as duly treated biomedical wastes for disposal at municipal dump site."
4. In the said rules, in rule 7, for sub-rule (1), the following sub-rule shall be substituted, namely: -
"(1) The prescribed authority for enforcement of the provisions of these rules shall be the State Pollution Control Boards in respect of states and the Pollution Control Committees in respect of the Union territories and all pending cases with a prescribed authority appointed earlier shall stand transferred to the Concerned State Pollution Control Board, or as the case may be, the Pollution Control Committees".
5. In the said rules, in rule 8, after sub-rule (3), the following sub-rule shall be inserted, namely: -
"(4) The authorization to operate a facility shall be issued in Form IV, subjects to conditions laid therein and such other condition, as the prescribed authority, may consider it necessary."
6. In the said rules, in rule 9, the words "The State Pollution Control Board/Pollution Control Committees shall be represented" shall be omitted.
7. In the said rules, in rule 13, after the words "prefer an appeal" the words and letter "in form V" shall be inserted.

8. In the said rules, after rule 13, the following rule shall be inserted, namely: -
Common disposal/incineration sites 14, Without prejudice to rule 5 of these rules, the Municipal Corporations, Municipal Boards or Urban Local bodies, as the case may be, shall be responsible for providing suitable common disposal/incineration sites for the biomedical wastes generated in the area under their jurisdiction and in the areas outside the jurisdiction of any municipal body, it shall be the responsibility of the occupier generating bio-medical waste/operator of a bio-medical waste treatment facility to arrange for suitable sites individually or in association, so as to comply with the provisions of these rules”.
9. In the said rules, in Schedule I, --
 - a. in the sub-heading, for the word “option” the words “Waste Category No.” shall be substituted;
 - b. in the sub-heading, after the words, “Waste Category” the word “Type” shall be added;
 - c. in the sub-heading, for the words “Treatment and Disposal”, the following shall be substituted, namely: “Treatment and Disposal Option+”
+ Options given above are based on available technologies. Occupier/Operator wishing to use other State-of-the-art technologies shall approach the Central Pollution Control Board to get the standards laid down to enable the prescribed authority to consider grant of authorization,
 - d. against Category No. 6, in the second column, for the word “Solid” the word “Soiled” shall be substituted;
 - e. against Category No. 7, in the second column, for the word “shapsr” the word “sharps shall be substituted.
10. In the said rules, in FORM I, for the heading, the following heading shall be substituted namely: - “Application for authorization/Renewal of Authorization”
11. In the said rules, after Form III and the entries relating thereto, the following FORMS shall be added, namely:

“FORMS IV & V”
(attached)
FORM IV
[See rule 8 (4)]

(Authorisation for operating a facility for collection, reception, treatment, storage, transport and disposal of biomedical wastes).

1. File number of authorization and date of issue.....
.....
2.of is hereby granted an authorization for operating a facility for collection, reception, treatment, storage, transport and disposal of biomedical waste on the premises situated at
3. This authorization shall be in force for a period of Years from the date of issue.
4. This authorization is subject to the conditions stated below and to such other conditions as may be specified in the rules for the time being in force under the Environment (protection) Act, 1986.

Date Signature

Designation

Terms and conditions of authorization

1. The authorization shall comply with the provisions of the Environment (Protection) Act, 1986, and the rules made thereunder.
2. The authorization or its renewal shall be produced for inspection at the request of an officer authorized by the prescribed authority.
3. The person authorized shall not rent, lend, sell, transfer or otherwise transport the biomedical wastes without obtaining prior permission of the prescribed authority.
4. Any unauthorized change in personnel, equipment or working conditions as mentioned in the application by the person authorized shall constitute a breach of his authorization.
5. It is the duty of the authorized person to take prior permission of the prescribed authority to close down the facility.

* Additional terms and conditions may be stipulated by the prescribed authority

FORM V
[see rule 13]

Application for filing appeal against order passed by the prescribed authority at district level or regional office of the Pollution Control Board acting as prescribed authority or the State/Union Territory level authority.

Name and address of the person applying for appeal:

Number, date of order and address of the authority which passed the order against which appeal is made (certified copy of order to be attached)

Ground on which the appeal is being made

List of enclosures other than the order referred in Para 2 against which appeal is being filed.

Date:

Signature

Name & Address

The Gazette of India

NOTIFICATION

New Delhi, 17th September 2003

S.O. 1069(E)- In exercise of the powers conferred by sections 6, 8 and 25 of the Environment (Protection) Act, 1986 (29 of 1986), the Central Government hereby makes the following rules further to amend the Bio-Medical Waste (Management and Handling) Rules, 1998, namely: -

1. a. These rules may be called the Bio Medical Waste (Management and Handling) (Amendment) Rules, 2003.
b. They shall come into force on the date of their publication in the Official Gazette.
2. In rule 7 of the Bio-Medical Waste (Management and Handling) Rules, 1998 (hereinafter referred to as the said rules): -
 - a. in sub-rule (1), for the opening words "The prescribed authority for enforcement" shall be substituted;
 - b. after sub-rule (1), the following sub-rule shall be inserted, namely: -
 "(1A). The prescribed authority for enforcement of the provisions of these rules In; respect of all health care establishments including hospitals, nursing homes, clinics, dispensaries, veterinary institutions, Animals houses, pathological laboratories and blood banks of the Armed Forces Medical services."
3. In the said rules, existing rule 9 shall be re-numbered as sub-rule (1) thereof, and after sub-rule (1) as so re-numbered, the following sub-rule shall be inserted, namely: -
 "(2) Notwithstanding anything contained In sub-rule (1), the Ministry of Defence shall constitute in that Ministry, an Advisory Committee consisting of the following in respect of all health care establishments including hospitals, nursing homes, clinics, dispensaries, veterinary; institutions, animal houses, pathological laboratories and blood banks of the Armed Forces under the Ministry of Defence, to advise the Director General, Armed Forces Medical Services and the Ministry of Defence in matters relating to implementation of these rules, namely:-

1. Additional Director General of Armed Forces Medical Services	Chairman
2. A representative of the Ministry of Defence not below the rank of deputy Secretary, to be nominated by that Ministry	Member
3. A representative of the Ministry of Environment and Forests not below the rank of deputy secretary to be nominated by that Ministry	Member
4. A representative of the Indian Society of Hospitals Waste Management, Pune	Member
5. In the said rules, after rule 9, the following rule shall be Inserted, namely: -
 "9A. Monitoring of implementation of the rules in Armed Forces Health Care establishments:
 - a. The Central Pollution Control Board shall monitor the implementation of these rules in respect of all the Armed Forces health care establishments under the Ministry of Defence.
 - b. After giving prior notice to the Director General Armed Forces Medical Services, the Central Pollution Control Board along with one or more representatives of the Advisory Committee constituted under sub-

rule (2) of rule 9 may, if it considers it necessary, inspect any Armed Forces health establishments.”

6. In the said rules, existing rule 13 shall be re-numbered as sub-rule (1) thereof; and-
 - a. In sub-rule (1), as so re-numbered, for the opening portion, for the words “Any person”, the words, brackets and figure “Save as otherwise provided in sub-rule (2), any person” shall be substituted.
 - b. After sub-rule (1) as so re-numbered, the following sub-rule shall be Inserted, namely:

“(2) Any person aggrieved by an order of the Director General, Armed Forces Medical Services under these rules may, within thirty days from the date on which the order is communicated to him prefer an appeal to the Central Government in the Ministry of Environment and Forests.”

[F.No.23-2/96-HSMD]

Dr. V. RAJAGOPAL, Jt. Secy.

Note: The Principle rules were published in the Gazette of India vide notification number S.O. 630 (E) dated 20.7.98 and subsequently amended vide (1) S.O.201 (E) dated 6.3.2000; and (2) S.O.545 (E) dated 2.6.2000.

The institutions requiring renewal of authorization should immediately apply to DPCC.

Hydroclave System

Figure 13

Hazards of Biomedical/Health Care Waste

Hospital waste / health care waste includes all the waste generated by health care establishments, research facilities, and laboratories including minor or scattered source-such as health care taken at home (Insulin Injection).

About 75% to 90% of the waste produced by health care providers is non-hazardous "general waste" comparable to domestic waste.

Classification of hazardous waste:

WHO has classified hazardous waste into following categories:

1. Infectious waste: (suspected to contain pathogens): e.g. laboratory culture, waste from isolation wards, tissue-swabs, material in contact with infected patient, excreta.
2. Pathological waste: (containing human tissue or fluids): e.g. body parts blood and other body fluids, fetuses.
3. Sharps: (Sharp material): e.g. needles; infusion sets; scalpels; knives; blades; broken glass.
4. Pharmaceutical waste: (containing pharmaceuticals) e.g. expired drugs; contaminated bottles; boxes
5. Genotoxic waste: e.g. waste containing cytostatic drugs; genotoxic chemicals.
6. Chemical waste: e.g. laboratory reagents; film developer expired disinfectants, solvents.
7. Waste with heavy metals: e.g. batteries; broken thermometer.
8. Pressurized containers: e.g. gas cylinders; gas cartridges; aerosol cans.
9. Radioactive material: e.g. unused liquid from radiotherapy; contaminated glass ware; urine excreta from patient treated with unsealed radio nucleotides.

Types of hazards:

The exposure to hazardous health care waste can result into:

1. Infection.
2. Genotoxicity and Cytotoxicity
3. Chemical toxicity
4. Radioactivity hazards.
5. Physical injuries
6. Public sensitivity.
 1. Infection:- The infectious agents can enter in the body through a puncture, abrasion, or cut in the skin; through mucous membranes; by inhalation and ingestion. Commonest infections, which can result from mishandling of hospital/health care waste, are gastro enteric through faeces and/or vomit (Salmonella, Shigella spp., Vibrio Cholera, Helminthes; Hepatitis A), Respiratory through inhaled secretions; saliva (Mycobacterium tuberculosis; measles virus; streptococcus pneumoniae), Ocular infections through eye secretions (Herpes virus), Genital infections (Neisseria gonorrhoeae; herpes virus), Skin infection through pus (Streptococcus spp.), meningitis through Cerebrospinal fluid (neisseria meningitides), AIDS through blood and sexual secretions (HIV), Haemorrhagic fevers through body fluids (Junin, Lassa, Ebola and Marburg viruses), Septicemia and bacteraemia through blood (staphylococcus aureus, Enterococcus, enterobacter, klebsiella and streptococcus) and Viral Hepatitis B & C through blood and body fluids (hepatitis B and C viruses).

2. Genotoxicity and Cytotoxicity:- many cytotoxic drugs are extremely irritant and have harmful local effects after direct contact with skin and eyes (alkylating agents; Intercalating agents; vinca alkaloids and derivatives and epipodophyllotoxins). Many neoplastic drugs are carcinogenic and mutagenic; secondary neoplasia is known to be associated with chemotherapy.
3. Chemical toxicity:- many of chemicals and pharmaceutical drugs used in health care establishments are hazardous (e.g. toxic, genotoxic, corrosive, flammable, reactive, explosive and shock-sensitive). They may cause intoxication by acute or chronic exposure, injuries including burns, poisoning.
4. Radioactivity hazards:- The radioactive waste exposure may cause headache, dizziness, vomiting, genotoxicity and tissue damage.
5. Physical injuries:- May result from sharps, chemicals and explosive agents.
6. Public sensitivity:- The general public is very sensitive about visual impact of the anatomical waste, recognizable body parts including fetuses if handled improperly.

Short Activities of IVPSS

ACTIVITIES AND ACHIEVEMENTS OF [FROM 1999 TO FEBRUARY 2005] INDRAPRASTHA VYAVSAYIK EVAM PARYAVARNEEYA SWASTHYA SAMITI SUPERVISING FUNCTIONING OF COEH

1. In order to strengthen occupational and environmental health and safety, IVPSS & COEH collaborated with following centres of excellence:
 - i University of California, Berkeley
 - ii University of California, San Francisco
 - iii University of Queensland, Australia
 - iv Collegium Ramazzini, Italy
 - v Drexel University, School of Public health, Philadelphia
 - vi International Agencies such as WHO, ILO etc.
2. Conferences and workshops training hundreds of environment, health and safety professionals, scientists were organized on:
 - i Continuing medical education in Occupational and Environmental Health
 - ii Risk assessment and management of workplace hazards
 - iii Noise Induced Hearing Loss in workplace
 - iii Industrial Hygiene Practices.
 - iv Specific hazardous industries: e.g., Cold storages, Health Care Workers etc.
3. Shared experiences in 30 International and national conferences on:
 - i Preventing chemical accidents
 - ii Environmental Epidemiology and Public Health Protection
 - iii Health hazards of Asbestos
 - iv Bio-Medical Waste management, including treatment and handling
4. Teaching Assignments:
 - i A yearly course of Industrial Health was started from the year 2005.
 - ii Teaching postgraduate physicians/students at National Institute of Health and Family Welfare, GOI.
 - iii Achyut Menon Centre for Health Sciences Studies, Trivandrum and others.
 - iv Master of Industrial Hygiene & Safety course, Sardar Patel University, Gujarat, in India's first course in collaboration with the Cincinnati University, USA.
5. Provided expertise on environmental health and safety to:
 - i Consumer Association of Penang, Malaysia
 - ii Punjab Haryana Delhi Chambers of Commerce and Industry,
 - iii Confederation of Indian Industry
 - iv ASSOCHAM,
 - v Indian Association of Occupational Health,

- vi Toxics Links
- vii IDC and many others.
- 6. Assessment and supervision of:
 - i Bio-Medical Waste Management in scores of healthcare establishments in Delhi on going activity.
- 7. Conducted more than 225 training programme since December 1998 on Bio-Medical Waste Management for Health Care Workers (HCW) training more than 7000 HCW.
The centre has published research work in leading international and national journals such as International journal of Occupational and environmental health, European Journal of Oncology, and others.

Areas of Interest:

1. Chemical hazards and exposures in workplace Benzene, Asbestos, Solvents and other heavy metals like mercury.
2. Injury prevention Needle stick injuries, eye injuries, and injury cases admitted to hospital.
3. Health risks and exposure in health care.
4. Laboratory Health and Safety
5. Air pollution and its Health Impact.
6. Issues in Bio Medical Waste Management

Consultancy: The Centre provides consultancy in the field of Environmental Health and Safety, and OSHAS 18001 implementation.

It is the only Centre in India listed in latest ILO encyclopedia of Occupational Health and Safety.

Currently Centre is assisting Union Ministry of Health in setting up Environmental Management Systems in Food and Drug Testing Laboratories across India as part of a World Bank project.

Assisting Union Ministry of Environment and Forests in studying the Health impact of Pollution in Faridabad, Haryana.

Contact address:

Centre for Occupational and Environmental Health, Ground Floor, B.L. Taneja Block, MAMC, Lok Nayak Hospital, New Delhi 110002

Biodegradable Plastics & Biomedical Waste

Plastics are primarily synthetic polymers combined with ingredients such as curative, fillers, reinforcing agents & plasticizers etc. which can attain desired shape, very easy to store economical long lasting. Chemically it is chain of macromolecules formed by combination of repeated group of monomers linked together for example polyethylene (H₂C: CH₂)_x

Global Consumptions

The global consumption of various types of plastic was estimated to time of 70 millions tons in the year 1990 which was further grown to 145 million tons (year 2001) in the beginning of twenty first century and its usage is increasing manifold.

Plastic - A Significant Contribution Of Twentieth Century

Plastic is one of the significant contribution of chemistry to mankind which has replaced the most conventional material being light weight, durable aesthetically appealing preserving nature and in general improving the quality of life for all mankind.

Plastic has invaded almost every facet of human life and over the last few decades it has brought revolution in variety of application area such as commodity items electronics, packaging, Bio-medical sports, entertainment, agriculture, horticulture and so on.

TODAY WE CANNOT VISUALIZE LIFE WITHOUT PLASTIC

Is it an environment friendly product???

Is it a really helping the mankind???

Conventional Plastic has raised eyebrow of many and a big No. has come in existence.

Hazards Of Plastic

- Causing infertility to soil
- Depleting under ground water resource
- Burning of plastics emits toxic gases causing serious damage to environment.
- A serious threat to life of all living creature like man, mammals and marine life
- Creator of unhygienic conditions when left unattended in the atmospheres.

What should we do? Is there any alternative?

Yes!

BIODEGRADABLE PLASTICS

Biodegradable plastic is a Combination of conventional plastic and additive commonly called as Master Batch which degrades, decompose or break down under natural conditions / process

The American Society for Testing and Materials / Institute for Standard Research (ASTM/ISR) and its somewhat analogous counterpart, the European Committee for Standardization (Comite European de Normalization or CEN). The definitions being used by ASTM/ISR and CEN may shed some light on what these critical terms mean in the specific context of plastics.

DEGRADABLE: "A material is called degradable with respect to specific environmental conditions if it undergoes degradation to a specific extent with in a given time measured by specific standard test methods".

DEGRADATION: An irreversible process leading to a significant change of the structure of a material, typically characterized by a loss of properties (For example integrity, molecular weight or structure, mechanical strength) and / or fragmentation. Degradation is affected by environmental conditions and proceeds over a period of time comprising one or more steps.

DEGRADABLE PLASTICS: A plastic designed to undergo a significant change in its chemical structure under specific environmental conditions, resulting in a loss of some properties that may be measured by standard methods appropriate to the plastic and the application in a period of time that determines its classification.

BIODEGRADABLE PLASTICS: A degradable plastic in which the degradation results from the action of naturally occurring microorganisms such as bacteria, fungi and algae.

COMPOSTABLE PLASTIC: A plastic that undergoes biological degradation during composting to yield carbon dioxide, water, inorganic compounds and biomass at a rate consistent with other known compost able materials and leaves no visually distinguishable or toxic residues.

However, truly worldwide agreement on such vocabularies is still not firmly in place.

How Does Degradation Takes Place In BDPs:

There are primarily three mechanisms in the degradation of BDPs:

- a) PHOTO-OXIDATIVE DEGRADATION: Ultra Violet (UV) radiation from sunlight and oxygen trigger a free radical reaction (i.e. Chain reaction) in BDPs resulting in break down of the polymer chain and hence lowering of molecular weight.
- b) THERMO-OXIDATIVE DEGRADATION: Heat and oxygen trigger a free radical reaction (i.e. chain reaction) in BDPs resulting in break down of the polymer chain and hence lowering of molecular weight.
- c) BIODEGRADATION: Biodegradation starts when microorganisms begin to grow on the surface of bags and secrete enzymes that break down the polymer into molecular building blocks, called hydro-oxo acids. The hydroxyl acids are then taken up by the microorganisms and used as carbon source for growth. In aerobic environment (i.e. in presence of air) the polymers are degraded to carbon dioxide, water and biomass, whereas in anaerobic environments (i.e. in absence of air) the polymers are degraded to methane, water and biomass.

All the above degradation mechanisms will occur simultaneously.

Frequently Asked Questions:

Q. What is Bio-medical Waste?

Ans. Bio-medical waste is the waste that is generated during the diagnosis, treatment or immunization of human beings or animals, or in research activities pertaining thereto, or in the production or testing of biological.

Q. What responsibilities do institutions generating bio-medical waste have?

Ans. It is mandatory for such institutions to:

- Set up requisite bio-medical waste treatment facilities like incinerators, autoclave and microwave systems for treatment of the wastes, or ensure requisite treatment of the waste at a common waste treatment facility
- make an application to the concerned authorities for grant of authorization. A fee as prescribed shall accompany each application for grant of authorization.
- submit a report to the prescribed authority by 31 January every year. The report should include information about the categories and quantities of bio-medical handled during the preceding year.
- maintain records about the generation, collection, reception, storage, transportation, treatment, disposal and/or any form of handling bio-medical waste.
- report any accident to the prescribed authority

Q. In order to comply, what has to be done?

Ans. After setting up required waste management facilities, the occupier needs to make an application in Form-I (Bio-Medical Rules 16), to the prescribing Authority for Grant of Authorization. The Prescribing Authority on receipt of the application will make such inquiry as it deems fit, and if it is satisfied that the applicant possesses the necessary capacity to handle bio-medical waste in accordance with the Rules, it will grant or renew an authorization as the case may be. An Authorization will be granted for a period of 3 years, including an initial trial period of one year from the date of issue. A provisional authorization will be granted for the trial period to enable the occupier/operator to demonstrate the capacity of the facility.

Q. Where in health care establishment's wastes generated?

Ans. The different location or points of waste generation are:

- Operation theaters/wards/labour room/OPD
- Dressing rooms
- Injection rooms
- Intensive Care Units, ITU, CCU
- Dialysis room
- Laboratory
- Corridor
- Compound of hospital or nursing home

Q. What are the various categories of wastes and how are they to be treated?

Ans. There are various types of bio-medical waste. Each type has to be disposed according to its characteristics. Please [Click here](#) for see the different categories.

Q. What is the first step in waste management?

Ans. Creating systems for segregation of waste is the first step. Segregation at source of different types of bio-medical wastes and their appropriate storage and/or disinfections sterilization, etc. would ensure that infectious wastes do not get mixed with non-infectious wastes as this would infect the entire waste. Only a small fraction of waste generated by health care institutions is actually infectious or hazardous. It is estimated that 80-85 per cent is non-infectious, 10 per cent is infectious and 5 per cent is hazardous.

Segregation of waste into infected or contaminated waste and non-infected waste is mandatory and is a prerequisite for safe and hygienic waste management. Segregation at source makes it easier to prevent spread of infection, makes it easier to choose among the options of disposal, and can reduce the load on the incinerator and prevent injuries.

Q. How are wastes to be segregated?

Ans. Infected waste can be segregated into:

- Dressings
- Organs and organ parts, placenta, associated body fluids (blood/pus/pleural or peritoneal fluids etc.)
- Broken glass ware
- Intact glass ware
- Needles, razor blades, scalpel blades, nails, pins, bones etc.
- Microbiology waste, non-reusable specimen containers
- General waste

The Rules have laid down certain directions regarding segregation and storage to ensure safe and hygienic handling of infectious and non-infectious waste. Among these:

- No bio-medical waste shall be mixed with other wastes
- Bio-medical waste be segregated into containers/bags at the point of generation.
- These containers/bags are to be made of different materials and have different Colour coding signifying the different kinds of wastes.
- Segregation is mandatory prior to storage, transportation, treatment and disposal

Q. How are bio-medical wastes to be stored after segregation?

Ans. The Bio-Medical Rules have recommended different color codes for waste containers in which different types of wastes needs to be stored. Clinical and general wastes should be segregated at source and placed in color coded plastic bags and containers of definite specifications prior to collection and disposal

The container should comprise of an inner plastic bag of varied color depending on the type of waste. It should be of a minimum gauge of 55 micron (if of low density) or 25 micron (if of high density), leak proof and puncture proof, and should match the chosen outer container. the outer container is a plastic bin with handles, and of a size which will depend on the amount of waste generated. The inner polythene bag should fit into the container with one-fourth of the polythene bag turned over the rim.

Labeling has been recommended to indicate the type of waste, site of generation, name of generating hospital or facility. This will allow the waste to be traced from the point of generation to the disposal area.

The containers are then to be transported in closed trolleys or wheeled containers that should be designed for easy cleaning and draining.

Categories and color coding recommended for segregation in health-care establishment, including the categories mentioned in the Bio-Medical Waste Regulations of the Ministry of Environment and Forests, Government of India.

Category	Type of Waste	Container	Colour
Cat. 1	Human Anatomical Waste, blood and body fluids, bandages, animal and slaughter house waste, microbiology and biotechnology waste, extremely soiled linen	Tubs, buckets with lids	YELLOW
Cat. 2	Sharps - Two types Reusable sharps such as some needles, scalpels, surgical instruments separated by needle/sharp separator	Veterinary institutions, dispensaries and animal houses	WHITE or TRANSLUCENT
	Waste sharps such as broken glass, disposable needles, blades etc.	Cardboard carton	BLUE
Cat. 3	Disposable plastics, rubber/latex gloves	Bags or buckets, stainless steel drums	RED
Cat. 4	Chemical wastes, all hazardous wastes	Bucket with lid, cardboard container	BLACK
Cat. 5	Compost able waste	Buckets/drums/ trolley	GREEN
Cat. 6	Office paper	Cardboard boxes	

Q. What are the care to be taken in storage and transportation

Ans. Untreated bio-medical waste shall be transported only in specially designed vehicles.

No untreated bio-medical waste shall be stored beyond a period of 48 hours.

If for any reasons it becomes necessary to store the waste beyond such period, permission from the prescribed authority (established by the government of every State and Union Territory) must be taken, and it must be ensured that it does not adversely affect human health and the environment.

Q. Who is legally bound for applying to authorization?

Ans. Every hospital, Nursing Homes, Veterinary Hospitals, Animals Houses, Pathological labs & blood banks, generating hospital wastes. (except such occupier of clinics, dispensaries, pathological labs, blood banks providing treatment/service to less than 1000 (one thousand) patients per month).

Q. Where do I go and during which hours?

Ans. Information Center, Delhi Pollution Control Committee, 4th Floor, ISBT Building, Kashmere Gate, Delhi - 110 006. Between 10.00 A.M. to 4.00 P.M. on any working day. In case of difficulty, meet the Administrative Officer/Office Superintendent in the V Floor for help.

Q. Which papers/documents/fee, do I take with me?

- Ans. 1. An application form, duly filled up, and in prescribed format [Form-I]
 2. An affidavit on Rs.10/- non-judicial stamp paper having declaration in the prescribed format, duly attested by a notary public. ([Click Here for the language of Affidavit](#))
 3. Prescribed authorization fee for three years under Bio-Medical Waste (Management & Handling) Rules, 1998 through Demand Draft in favor of Delhi Pollution Control Committee.

4. Separate demand draft for Rs.100/- in favor of Delhi Pollution Control Committee, if the form can be downloaded from the web site.

5. Copy of the Agreement, if any, with operator of a facility/transporter of the Bio Medical Waste.

Q. Whom should I contact for disposal of Bio Medical Waste generated in my Health Care Establishment?

Ans. DPCC has authorized following three operators of facilities for collection, reception, storage, transportation, treatment and disposal of bio medical waste.

1. Bio Care Technological Services,
55, Railway Road, Samaipur Industrial Area, Delhi-42
Phone No. 27898011, 27898033, 27866142

2. Synergy Waste Management Pvt. Limited
Okhla, Near Sukhdev Vihar, Delhi
Phone No.

Q. What will be the Criteria used while deciding my case?

Ans. Completion of Application in all respect of fee and other documents.

Q. When will I get a response?

Ans. You should be getting a response normally within 90 days.

Glossary

Activity	Disintegration of an amount of radionuclide in a particular energy state per time interval at a given time.
Antineoplastic	Inhibiting or preventing the development of neoplasms
Antisepsis	Prevention of infection by inhibiting the growth of infectious agents
Biomedical Waste	Any waste, which is generated during the diagnosis, treatment or immunization of human beings or animals or in research activities pertaining thereto or in the production or testing of biologicals and including categories mentioned in schedule I.
Capacity	The quantity of solid waste that can be processed in a given time under certain specified conditions usually expressed in terms of mass per 24 hours.
Characterization	The determination of the physical and chemical and for radioactive waste radiological properties of waste, of other features, to establish the need for further adjustment, treatment, or conditioning, or suitability for further handling, processing, storage or disposal.
Clearance Levels	A set of values established by the regulatory authority and expressed in terms of activity concentrations and/or total activities, at or below which sources of radiation can be released from regulatory control.
Container	Vessel in which waste is placed for handling, transportation,, storage, and/or eventual disposal. The waste container is a component of the waste package.
Cytostatic	Causing suppression of growth and multiplication of cells.
Cytotoxic	Possessing a specific destructive action on certain cells; used in particular in referring to the lysis (Disintegration or dissolution) of cells brought about by immune phenomena and to Antineoplastic drugs that selectively kill dividing cells.
Decontamination	Reduction of Microbiological contamination to a safe level.
Disinfectant	Chemical agent that is able to reduce the visibility of microorganisms
Disinfection	Treatment aimed at reducing the number of vegetative microorganisms to a safe or relative safe levels.
Disposal	Intentional burial, deposit, discharge, dumping, placing, or release of any waste material into or on any air, land or water. In the context of radioactive waste management, disposal means the emplacement of waste in an approved direct discharge of effluents in the environment. Disposal is undertaken without the intention of retrieval.
Furnace	The chamber of the incinerator into which the refuse is charged or subsequent ignition and burning.
Genotoxic	Descriptive of a substance that is capable of interacting directly with genetic material, causing DNA damage that can be assayed. The term may refer to carcinogenic, mutagenic, or teratogenic substances.
Groundwater	The waste contained in porous underground strata as a result of infiltration from the surface.
Handling	The functions associated with the movement of solid materials, excluding storage, processing and ultimate disposal.

Hazard	Intrinsic potential property or ability (e.g. of any agent, equipment, material or process) to cause harm.
Heating Value/ Calorific value	The quality of heat that is produced when the unit mass of a material undergoes complete combustion under certain specified conditions. For solids, it is expressed in terms of calories or joules per kilogram 9kcal/kg, kj/kg; MJ/kg,etc). The high heating value includes the specific enthalpy of vaporization, whereas the low heating value omits it.
Hospital	Hospital is a residential establishment which provides short term and long term medical care consisting of observational, diagnostic, therapeutic and rehabilitative services for a person suffering or suspected to be suffering from disease or injury and for parturient. It may or may not also provide services for ambulatory patients on an outpatient basis.
Incineration	The controlled burning of solid, liquid or gaseous combustible wastes to produce gases and residues containing little or no combustible material.
Lechate	Liquid from a landfill containing substances that were present in the waste, either as liquid as solid, and were dissolved by the water passing through the waste.
Micro-organism	Any micro-biological entity, cellular, capable of replication or of transferring genetic material.
Monitoring	The measurement of a concentration or other parameter (radiation or radio nuclide concentration in the context of radioactive waste management) for purposes of assessment or control of environmental quality or exposure and the interpretation of such measurements. Monitoring can be continuous or non-continuous.
Municipal Waste	General Waste for collection by municipalities, generated mainly by households, commercial activities and street sweeping.
Pyrolysis	The decomposition of organic material by heat in the absence, or with a limited supply, of oxygen.
Radioactive Waste	Material that contains, or is contaminated with, radio nuclide at concentrations or activities greater than clearance levels and for which no use is foreseen.
Recycling	A term embracing the recovery and refuse of scrap or waste material for manufacturing or other purposes.
Residence Time	The time that elapses between the entry of substance into a furnace and the exit of burn out residue from the furnace.
Residue	The material remaining after combustion of waste such as ash or slag. Also refers to materials extracted from a liquid or gas stream.
Risk	Probability that a hazard will cause harm, and the severity of that harm.
Groundwater	The waste contained in porous underground strata as a result of infiltration from the surface.
Sanitary Land filling	An engineered method of disposing of solid waste on land in a manner that protects the environment, e.g. by spreading the waste in thin layers, compacting it to the smallest practical volume, and covering it with soil by the end of each working day, constructing barriers to infiltration, evacuating the gases produced.
Scavenging	The manual sorting of solid waste at landfills and removable of usable material.
Segregation	The systematic separation of solid waste into designated categories.
Sewage	A community's water supply after it has been fouled by various uses. Its sources may be a combination of the liquid or water carried wastes from domestic, municipal and industrial

	premises, together with such groundwater, surface water, and storm water as may be present.
Sewerage	A system for the collection and transport of sewage, including conduits, pipes and pumping stations.
Sludge	The accumulated solids that separate from liquids such as water or waste water during processing, or deposits on the bottom of streams of other bodies or water.
Sterilization	A reduction in microorganisms of more than 10^6 (more than 99.9999%) of the microorganisms are killed), achieved by physical, chemical or mechanical methods or by irradiation.
Storage	The placement of waste in a suitable location or facility where isolation, environmental and health protection, and human control (e.g. monitoring for radioactivity, limitation of access) are provided. This is done with the intention that the waste will be subsequently retrieved for treatment and conditioning and/or disposal (or clearance of radioactive waste)
Treatment	Any method, technique or process for altering the biological, chemical or physical characteristics of waste to reduce the hazards it presents and facilitate, or reduce the costs of disposal. The basic treatment objectives include volume reduction, disinfection, neutralization, or change of composition to reduce hazards, including removal of radio nuclides from radioactive waste.
Waste	Anything, which is not intended for further use, is termed as waste.
Waste Generator	Any person, organization or the facility engaged in activities that generate waste.
Waste Inventory	In the context of radioactive waste management, a detailed, itemized record maintained by the operator or regulatory authority in accordance with established regulations; it may contain data such as physical quantity, the activity of the waste, the radio nuclide content.
Waste Management	All the activities, administrative and operational, involved in the handling, treatment, conditioning, storage, and disposal of waste (including transportation).
Waste Package	The product of waste conditioning, which includes the waste form, waste container (s), of any barriers (e.g. absorbing materials or liners), prepared in accordance with requirements of handling, transportation, storage, and/or disposal.

Abbreviations Used

AAAH	: Aruna Asaf Ali Hospital	LRSITBCD	: Lala Ram Swaroop Institute of TB & Chest Disease
ASJH	: Attar Sen Jain Hospital	Mal NC H	: Malviya Nagar Colony Hospital
AIDS	: Acquired Immuno Deficiency Syndrome	Moti NH	: Moti Nagar Hospital
BJRMH	: Babu Jagjiwan Ram Memorial Hospital	MB Hosp	: Maharishi Balmiki Hospital
BMH	: Bhagwan Mahavir Hospital	MAH	: Maharaja Aggarsain Hospital
BRSH	: B.R. Sur Hospital	MCDH	: Mata Chanan Devi Hospital
BSAH	: Baba Saheb Ambedkar Hospital	MH-LR	: Maternity Hospital Lodhi Road
